

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, April 2, 2011 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (39 new fires)
 New large fires: 3 (*)
 Large fires contained: 0
 Uncontained large fires: ** 8
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

Nationally, there are 2 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires: 26
 New large fires: 2
 Uncontained large fires: 7
 Type 2 IMTs committed: 1

Southeast GA Complex (4 fires), Georgia Forestry Commission. Georgia IMT 2 (Floyd). Eight miles south of Waycross, GA. Southern rough. Active interior burning. Numerous structures threatened.

Elim Church Rd., Georgia Forestry Commission. One mile northeast of Ludiwici, GA. Southern rough. Creeping and smoldering.

* **Harkey Road**, Texas Forest Service. Started on private land nineteen miles northeast of Eldorado, TX. Juniper and grass. Running fire.

* **Bole**, Okmulgee Field Office, BIA. Two miles south of Boley, OK. Timber. Backing fire. Several structures threatened.

Predictive Services Discussion: Strong winds and low relative humidity are expected across the high plains of Wyoming south to New Mexico and west Texas today. Florida will be dry statewide. Rain and snow showers will continue in the Pacific Northwest and the northern Rockies, with widespread snow in New England. Warm temperatures are expected over southern California and Arizona.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Weather / Fire Behavior Category.

[Scenario](#)

EXTREME FIRE BEHAVIOR (part 2)

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
 - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
 - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds
 - Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes.
- To aid situational awareness, track NFDRS live and dead fuel moisture outputs.
- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
