

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, April 5, 2011 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Moderate (298 new fires)
 New large fires: 13 (*)
 Large fires contained: 16
 Uncontained large fires: ** 24
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

Nationally, there are 2 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Rocky Mountain Area (PL 2)

New fires: 0
 New large fires: 0
 Uncontained large fires: 2
 Type 1 IMTs committed: 1

Crystal, Larimer County. IMT 1 (Summerfelt). Ten miles northwest of Masonville, CO. Timber and grass. Creeping and smoldering. Residences threatened. Reduction in acreage due to more accurate mapping.

Haskell County, Kansas Counties. Twelve miles west of Sublette, KS. Grass. No new information.

Southern Area (PL 3)

New fires: 271
 New large fires: 11
 Uncontained large fires: 11
 Type 2 IMTs committed: 1

Southeast GA Complex (4 fires), Georgia Forestry Commission. Transfer of command from Georgia IMT 2 (Floyd) back to local unit will occur today. Eight miles south of Waycross, GA. Southern rough and cypress swamp. Smoldering in heavy fuels.

Elim Church Rd., Georgia Forestry Commission. One mile northeast of Ludiwici, GA. Southern rough. Minimal fire activity.

Camp Bowie, Texas Forest Service. Started on private land six miles southeast of Brownwood, TX. Grass. Active fire behavior.

* **Dierks**, Arkansas Forestry Commission. One mile east of Dierks, AR. Timber. No further information received.

West Crane, Texas Forest Service. One mile west of Crane, Texas. Grass. Running fire.

G. Clayton, Oklahoma DOF. Six miles east of Kenwood, OK. Hardwood litter. No new information.

* **Emerson**, Arkansas Forestry Commission. One mile east of Emerson, AR. Timber. No further information received.

* **Russell Flat**, Daniel Boone NF. Twelve miles north of McKee, KY. Logging slash. Short-range spotting.

* **Windy**, Ozark and St. Francis NF. Two miles northwest of Big Flat, AR. Timber. Smoldering. Last report unless significant activity occurs.

Predictive Services Discussion: Strong westerly winds and low relative humidity in the teens will prevail over eastern Colorado and Kansas today. Gusty south to west afternoon winds, along with low relative humidity in the single digits and teens, will affect the southwestern U.S. from Arizona to Oklahoma and Texas. Rain and snow showers will continue in the Pacific Northwest into the northern Rockies.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Hazard Tree Category.

Hazard Trees – Situational Awareness

Snags (dead, standing trees without leaves or needles in the crowns) and green hazard trees present a significant threat to wildland firefighter safety. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw off embers creating spot fires in advance of the main fire. Snags may burn through more quickly than green trees and can fall without warning. Live, green trees weakened by insects, disease, weather, fire, and age presents another hazard and they can also fall without notice.

- The risk of serious injuries from hazard trees may increase during the night operational period when visibility is reduced.
- While work in cooler, nighttime environments can help control efforts, it also presents an increased risk from unseen falling snags and weakened live trees. Night operations should be restricted in areas of high risk rated dead and dying trees.
- Environmental conditions that increase risk from hazard trees: Strong or gusty winds from storm cells. Air operations - water or retardant drops, rotor wash from helicopters. Steep slopes with rolling material. Erosion and undercut root systems. Diseased or bug-killed areas (Mountain Pine Beetle).
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) in the area. Numerous downed trees/material. Broken tops and dead limbs overhead. Accumulation of downed limbs, tree decay, cavities, splits, cracks, lack of needles, bark, limbs or other indicators of overhead hazards. Roots damaged by equipment, fire or erosion create hazards.
- Mitigation measures to take: Identify and establish No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated. Instruct firefighters of established NWZ in briefings. Identify with flagging/signs, and show area on maps. Establish lookouts to protect NWZs. Assign only qualified sawyers and Falling Bosses. Order additional professional fallers in advance. Use heavy equipment, and blasters when appropriate. Plan a quick and safe escape routes. Do not turn your back on a falling tree or known hazard. Use lookouts to maintain secure felling areas. Maintain situational awareness.
