

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, March 13, 2011 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (54 new fires)
New large fires:	8 (*)
Large fires contained:	2
Uncontained large fires: **	13
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 1 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	51
New large fires:	6
Uncontained large fires:	10

Big Trickle Ranch, Texas Forest Service. Started on private land three miles northeast of Walnut Springs, TX. Brush and grass. Minimal fire activity. Reduction in acreage due to more accurate mapping.

Enmin, Texas Forest Service. Started on private land 11 miles northwest of Perrin, TX. Brush and grass. Minimal fire activity.

* **Blanco**, Oklahoma DOF. Four miles south of Blanco, OK. Grass. No further information received.

Middle Mountain, Oklahoma DOF. Ten miles northwest of Clayton, OK. Grass. No new information.

* **Kentucky Rain**, Osage Agency, BIA. Four miles east of Barnsdall, OK. Hardwood litter and grass. Minimal fire activity.

Limestone, Oklahoma DOF. Five miles west of Wesley, OK. Grass. No new information.

Valley X, Oklahoma DOF. Five miles west of Wesley, OK. Grass. No further information received.

* **DOK**, Oklahoma DOF. Six miles north of Lane, OK. Grass. No further information received.

Blowup Canyon, Oklahoma DOF. Three miles west of Wesley, OK. Grass. No further information received.

* **Herman Jones**, Oklahoma DOF. Nine miles southeast of Stilwell, OK. Hardwood litter. No further information received.

Predictive Services Discussion: A weakening cold front will stretch across the southern US from the Mid-Atlantic states to central New Mexico. Relative humidity will drop into the teens across southern New Mexico, west Texas and in northern Florida. Another storm system will enter the Northwest, bringing rain to coastal areas of northern California, Oregon and Washington and rain and snow eastward into northern Idaho.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
First Aid / Health Category.

HYDRATION

Dehydration is the result of the body trying to regulate its temperature naturally through sweating. Studies conducted on wildland firefighters indicate that during fire suppression activities firefighters need to drink a minimum of 1 quart of fluid each hour of work.

- Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Hyponatremia (abnormally low concentration of sodium in the blood) as a result of excessive water intake a potentially life-threatening complication. Hyponatremia can be prevented when rehydration is enhanced by fluids containing sodium and potassium, or when foods with these electrolytes are consumed along with the fluid.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement. Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine, or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.
