

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 25, 2011 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (100 new fires)
New large fires:	7 (*)
Large fires contained:	3
Uncontained large fires: **	15
Area Command Teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	7

Nationally, there is 1 large fire being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Geographic Area daily reports: <http://www.nifc.gov/nicc/predictive/statelinks.htm>

Southern Area (PL 3)

New fires:	67
New large fires:	7
Uncontained large fires:	9
NIMOs committed:	1
Type 2 IMTs committed:	4

NIMO (Gage) and IMT 2 (Dueitt) are assigned to manage large fires and provide support to initial attack operations for the West Branch Operational Area in Texas. Texas IMT 2 (Hannemann) is managing existing and new fires located in Texas state initial attack zones.

Honey Prairie, Okefenokee NWR. Florida IMT 2 (Leneave). Five miles northeast of Fargo, GA. Southern rough. Moderate fire activity.

Pains Bay, Alligator River NWR. North Carolina IMT 2 (Smith). Nineteen miles south of Manns Harbor, NC. Timber and brush. Active fire behavior. Residences threatened.

* **Derick**, Texas Forest Service. Eighteen miles east of Andrews, TX. Brush and grass. Extreme fire behavior. Residences threatened.

* **Sierra Blanca**, Texas Forest Service. Eight miles southeast of Hereford, TX. Grass. Active fire behavior. Residences threatened.

Tison, Sabine NWR. Seventeen miles southwest of Hackberry, LA. Grass. Moderate fire activity.

* **Canyon**, Texas Forest Service. Four miles southeast of Canyon, TX. Grass. Active fire behavior. Residences threatened. Evacuations in effect.

* **Ceed**, Texas Forest Service. Five miles west of Midland, TX. Brush and grass. Active fire behavior. Residences threatened. Evacuations in effect.

* **Middleton**, Texas Forest Service. Twenty-three miles west of Slaton, TX. Grass. Active fire behavior. Residences threatened.

* **Reese Center**, Texas Forest Service. Twelve miles west of Lubbock, TX. Grass. Active fire behavior. Residences threatened.

Tiger Cat, Mississippi Forestry Commission. Six miles northeast of Pearlinton, MS. Timber. No new information.

Predictive Services Discussion: Critical fire weather conditions associated with strong, gusty winds of 25 to 45 mph and low relative humidity below 12 percent will develop again over eastern New Mexico and west Texas. A powerful low pressure system will move across the central Plains and into the mid-Mississippi Valley, producing showers and thunderstorms from the front range of the Rockies to the Midwest and down to northeast Texas. Another frontal system entering the West Coast will produce scattered showers and a few thunderstorms from Washington to northern California. Scattered showers and a few thundertorms will develop over southwestern and interior Alaska.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
First Aid / Health Category.**

SERIOUS INJURY PROCEDURES

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
 - Number of people injured
 - Type of injuries
 - Severity of injuries (light, moderate, severe, life threatening)
 - Mechanism of injury
 - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patients condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
