

**National Interagency Coordination Center
Incident Management Situation Report
Friday, September 30, 2011 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (108 new fires)
New large fires:	3 (*)
Large fires contained:	1
Uncontained large fires: **	9
Area Command Teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	0

Nationally, there are 78 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

Two MAFFS from the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard) and support personnel have been activated and are operating from Austin, Texas. The two MAFFS C-130 aircraft and support personnel from the 302nd Airlift Wing, Colorado Springs (US Air Force Reserve) assigned in Austin will be released today.

Southern Area (PL 3)

New fires:	52
New large fires:	2
Uncontained large fires:	5
NIMOs committed:	1
Type 1 IMTs committed:	1

A NIMO (Kleinman) and an IMT 1 (Quesinberry) are assigned to provide support to existing and new fires in Texas.

Bastrop County Complex (two fires), Texas Forest Service. Six miles northeast of Bastrop, TX. Southern rough. Creeping and smoldering.

* **Dexter Point**, Florida DOF. Twenty eight miles west of Daytona Beach, FL. Grass. No further information received.

South 104, Texas Forest Service. Eleven miles southwest of Quanah, TX. Grass. Active fire behavior.

* **Cooper Mountain**, Texas Forest Service. Nineteen miles north of Snyder, TX. Grass. Active fire behavior.

Predictive Services Discussion: Temperatures will remain 10-15 degrees above normal for much of the West. Isolated showers and thunderstorms will develop over higher terrain across the Four Corners region and southern California - western Arizona. A strong Canadian high pressure area will dive south through the central U.S., bringing cool and dry weather to the Plains and the Southeast. Showers and thunderstorms will move through the Great Lakes region, the mid-Atlantic and New England.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Hazard Tree Category.**

FALLING SNAGS

Falling snags (dead, standing trees without leaves or needles in the crowns) present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw spot fires far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning.

- The risk of injuries from falling snags increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from falling snags:
 - Strong winds
 - Night operations
 - Steep slopes
 - Diseased or bug-killed areas
- Things to consider when assessing the potential hazards of both snags and green trees:
 - Trees have been burning for an extended period.
 - High-risk tree species (those that are known for rot and shallow root systems) are in the area.
 - Numerous downed trees
 - Dead or broken tips and limbs overhead
 - Accumulation of downed limbs
 - Absence of needles, bark or limbs
 - Leaning or hung-up trees
- Mitigation measures to take:
 - Identify and flag all high-risk snags and green trees.
 - Keep personnel out of the high-risk areas until the hazard has been removed.
 - Establish lookouts.
