

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, April 17, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Moderate (297 new fires)
 New large fires: 0 (*)
 Large fires contained: 1
 Uncontained large fires: ** 9
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Nationally there are no large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires: 145
 New large fires: 0
 Uncontained large fires: 8
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Easter Complex (five fires), George Washington & Jefferson NF. IMT1 (Quesinberry). One mile northeast of Buena Vista, VA. Hardwood litter. Moderate fire activity. Structures threatened.

County Line, National Forests in Florida. IMT 2 (Dueitt). Twenty-five miles north of Lake City, FL. Southern rough. Moderate fire activity within interior.

Cowpen Trail, National Forests in Mississippi. Seven miles southwest of New Augusta, MS. Grass. No new information.

Hickory Knob, Daniel Boone NF. Seven miles southwest Whitley City, KY. Hardwood litter. No new information.

Predictive Services Discussion: A trough moving across the central U.S. and a ridge building along the East coast will combine to produce windy and dry conditions across much of the mid-Atlantic and Northeast regions. Showers and thunderstorms will develop in the Southeast from Louisiana to Virginia. Cooler high pressure will stretch from the Great Lakes to Texas. Predominantly westerly flow over the West will produce scattered rain and snow showers from the northern Great Basin to the northern Plains. Gusty winds and low relative humidity will develop across parts of the Southwest. The remainder of the West will continue to be warm and dry. Scattered rain and snow showers will move across the southern coast of Alaska, while a low over the interior produces gusty winds in the western half of the state. The eastern interior will remain generally dry.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Wildland / Urban Interface Category.**

Wildland Urban Interface Hazards

Firefighters in the wildland urban interface may encounter hazards other than the fire itself, such as hazardous materials, utility lines and poor access.

● **Hazardous Materials**

- Common chemicals used around the home may be a direct hazard to firefighters from flammability, explosion potential and/or vapors or off-gassing. Such chemicals include paint, varnish and other flammable liquids; fertilizer; pesticides; cleansers; aerosol cans, fireworks, batteries and ammunition. In addition, some common household products such as plastics may give off very toxic fumes when they burn. Stay OUT of the smoke from burning structures and any unknown sources such as trash piles.

● **Illicit Activities**

- Marijuana plantations or drug production labs may be found in wildland urban interface areas. Extremely hazardous materials such as propane tanks and flammable/toxic chemicals may be encountered, as well as booby traps.

● **Propane tanks**

- Both large (household size) and small (gas grill size) liquefied propane gas (LPG) tanks can present hazards to firefighters, including explosion. See the "LPG Tank Hazards" discussion for details.

● **Utility lines**

- Utility lines may be located above and below ground and may be cut or damaged by tools or equipment. Don't spray water on utility lines or boxes.

● **Septic tanks and fields**

- Below-ground structures may not be readily apparent and may not support the weight of engines or other apparatus.

● **New construction materials**

- Many new construction materials have comparatively low melting points and may "off-gas" extremely hazardous vapors. Plastic decking materials that resemble wood are becoming more common and may begin softening and losing structural strength at 180° F, though they normally do not sustain combustion once direct flame is removed. However, if they continue to burn they exhibit the characteristics of flammable liquids.

● **Pets and livestock**

- Pets and livestock may be left when residents evacuate and will likely be highly stressed, making them more inclined to bite and kick. Firefighters should not put themselves at risk to rescue pets or livestock.

● **Evacuation occurring**

- Firefighters may be taking structural protection actions while evacuations of residents are occurring. Be very cautious of people driving erratically. Distraught residents may refuse to leave their property, and firefighters may need to disengage from fighting fire to contact law enforcement officers for assistance. In most jurisdictions firefighters do not have the authority to force evacuations. Firefighters should not put themselves at risk trying to protect someone who will not evacuate!

● **Limited access**

- Narrow one-lane roads with no turn-around room, inadequate or poorly maintained bridges and culverts are frequently found in wildland urban interface areas. Access should be sized-up and an evacuation plan for all emergency personnel should be developed.

Have an idea? Have feedback? Share it.
