

**National Interagency Coordination Center
Incident Management Situation Report
Monday, August 20, 2012 – 0530 MT
National Preparedness Level 4**

National Fire Activity

Initial attack activity:	Light (153 new fires)
New large fires:	7 (*)
Large fires contained:	5
Uncontained large fires: **	35
Area Command Teams committed:	1
NIMOs committed:	2
Type 1 IMTs committed:	9
Type 2 IMTs committed:	13

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

Four MAFFS C-130 aircraft and support personnel from the 302nd Airlift Wing, Colorado Springs (US Air Force Reserve), and the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard) are supporting wildland fire suppression operations out of Boise, ID. One MAFFS from the 145th Airlift Wing, Charlotte (North Carolina Air National Guard), along with one MAFFS from the 146th Airlift Wing, Channel Islands (California Air National Guard) are supporting wildland fire suppression operations out of Sacramento, CA.

Eastern Great Basin Area (PL 5)

New fires:	12
New large fires:	2
Uncontained large fires:	5
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	2

Whitney's Area Command Team is assigned to manage all Type 1 and Type 2 fires on the Boise, Sawtooth and Salmon-Challis National Forests. Current fires include Trinity Ridge, Springs, Halstead, Mustang and Minidoka Complex.

Trinity Ridge, Boise NF. IMT 1 (Harvey). Seven miles northwest of Featherville, ID. Timber. Active fire behavior with group tree torching and short-range spotting. Numerous structures threatened. Evacuations and area closures in effect.

Mustang Complex (3 fires), Salmon-Challis NF. IMT 1 (Joseph). Twenty-eight miles west of North Fork, ID. Timber. Active fire behavior. Structures threatened.

Halstead, Salmon-Challis NF. NIMO (Houseman). NIMO is also managing the Bench fire. Eighteen miles northwest of Stanley, ID. Timber. Active fire behavior with group tree torching and spotting. Numerous structures threatened. Area closures and voluntary evacuations in effect.

* **Whiskey**, Northwest Area, Utah DOF. Five miles south of Heber City, UT. Timber. Active fire behavior with torching and spotting.

Minidoka Complex, Sawtooth NF. Fifteen miles southeast of Twin Falls, ID. Pinyon pine, juniper, brush and grass. Creeping and smoldering. Area closures in effect.

Enclosure, Sawtooth NF. Ten miles west of Hailey, ID. Timber, brush and grass. Reduction in acreage due to more accurate mapping. No further information received. Last report unless significant activity occurs.

* **Red Ledges**, Uinta/Wasatch-Cache NF. Twenty miles east of Spanish Fork, UT. Timber. Running fire with spotting. Structures threatened. Evacuations in effect.

Predictive Services Discussion: Isolated to widely scattered thunderstorms will develop across the interior northwestern U.S. from eastern Oregon, central Idaho and into western portions of Montana and Wyoming. This will bring critical fire weather conditions to the region. Wet thunderstorms will continue across the Southwest and southern Great Basin. A slow-moving cold front will move through the deep South, producing showers and thunderstorms along the East Coast.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

"This Day in History" is a brief summary of a powerful learning opportunity. You can use this summary as a foundation and launch point for further dialogue and discussion.

Apply these lessons learned to yourself, your crew, your team and your unit.

The Great Fires of 1910 (The Big Blowup) - August 20th

Incident Summary: The 1910 fire season in the Northern Rockies was an unprecedented challenge to the US Forest Service. Record drought conditions had combined with an unusually strong lightning cycle and an abundance of man-caused fires. By July 15, there were over 3000 firefighters on the fireline in Region 1 of the Forest Service alone. On August 8, President Taft deployed numerous companies of the regular Army to northern Idaho and western Montana.

On August 20, an upper-level trough, centered in Saskatchewan, moved through the Northern Rockies between 1000 and 2100 hrs. This cold front passage brought a strong west/southwest wind that caused numerous fires to "blow-up" and join together to create large fire fronts that moved across the landscape. Fire crews across the Northern Rockies found themselves in danger of entrapment. Many were able to take refuge in previously burned areas, natural safety zones, and mine tunnels. Some were completely cut off, and by the end of the day, 85 persons - 78 of them firefighters - had lost their lives at 9 separate fatality sites.

This day in wildland fire history is dedicated to all those at the Big Blowup.

Lessons Learned Discussion Points

The fire behavior on August 20 was influenced a great deal by the drought conditions.

- *Discuss what a Fire Danger Pocket Card tells us (page 71 IRPG) and where to get them.*

Messengers were sent to some of the crews to warn them of the impending windstorm, but most of the crews received no warning.

- *We often depend on our handheld radios to receive critical weather updates. What backup systems / technologies can be used if our radios don't work?*

On the West Fork Big Creek fire, a 60 person crew was instructed by their supervisor to choose between two safety zones, the black from the previous burning period or the creek bottom below. 19 firefighters chose to take shelter in a nearby homesteader's cabin which ignited as the flame front passed. 18 of them perished rushing outside. The one survivor tripped at the door and fell to the ground.

- *What is your agency's policy on taking refuge in a structure? What considerations would you take into account?*

The 18 firefighters on the Stevens Peak fire burned out a safety zone in light fuels. One firefighter perished when he breathed in super-heated air.

- *Discuss the importance of protecting your airway in entrapment situations, and methods of doing so.*

When the 70 firefighters working on the Setser Creek fire were instructed by their supervisor to proceed downstream to a safety zone, 27 of them disregarded the

order and chose instead to follow the instructions of the Camp Cook who insisted there was no danger. All 28 lost their lives.

- *What tools are used by your crew/unit to improve crew cohesion in times of stress?*

On the Middle Fork Big Creek fire, one crew had retreated to a two-acre clearing with a stream running through it. Most of

the firefighters who sought refuge in the stream survived. Three firefighters, however, were killed when a large tree fell on them.

- *What factors influence the selection of a good safety zone? (page 7 IRPG)*

On the Storm Creek fire, the crew supervisor had led his 70 person crew to a safety zone consisting of black from the previous day's burn. This safety zone proved to be a good one, as the crew safely watched the fire burn around them. One firefighter left the protection of the safety zone and was found dead the next day.

- *How do you and your crew provide for firefighter accountability?*

After the Big Blowup, there were 116 injured firefighters. Some received their initial care from Army field surgeons. Others, including famous Ranger Ed Pulaski, were left with long-term disabilities.

- *What are the burn-injury protocols on your unit?*
