Predictive Services Discussion: Scattered showers and thunderstorms will continue across the Southwest, central Rockies and the eastern Great Basin, some producing heavy rain. Windy but cooler conditions will spread across the Northwest, northern Great Basin and northern Rockies, producing critical fire weather conditions for Idaho, Montana and Wyoming. Scattered thunderstorms will also form over the central and southern Plains. Mild conditions will continue over much of the eastern U.S., with a few thunderstorms developing along coastal areas from Texas to the Carolinas.

Today's discussion is from the
Hazard Tree Category.

HAZARD TREE - RISK MANAGEMENT

Situational Awareness/ Hazard Assessment

● Environment:

- Existing winds and forecast
- Night operations
- Steep slopes
- Diseased or bug-kill areas
- Number, density, and height of hazard trees
- Anticipated burn-down time
- Potential for domino effect to surrounding trees
- Maintain situational awareness and continually reassess hazards

● Hazard Tree Indicators:

- Trees burning for any period of time
- High risk tree species (rot and shallow roots)
- Numerous downed trees
- Dead, broken, or burning tops and limbs overhead
- Accumulation of downed limbs
- Absence of needles, bark or limbs
- Leaning or hung-up

● **Note:** In addition to suppression and mop-up operations, assess, control, and monitor hazard trees along roads and when selecting break areas or campsites.

● Hazard Control:

- Eliminate the hazards with qualified sawyers, blasters/explosives, or heavy equipment
- Avoid hazards by designating "No Work Zones" (NWZ) – (flag, sign, and map)
- Modify suppression tactics or fireline location to avoid extreme/high risk rated area
- Post lookouts to help maintain secure area
- Fire proof potential hazard trees to prevent ignition
- Initiate road/traffic control and area closure
- Keep clear of bucket drops near trees/snags
- Establish trigger points for reposition to secure areas in response to high winds
