

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, December 9, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (10 new fires)
 New large fires: 0 (*)
 Large fires contained: 1
 Uncontained large fires: ** 2
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: High pressure will settle into the West, bringing mostly fair but cold conditions to most of the interior. Scattered snow will linger over the central Rockies. Warm weather will remain over the Southwest and California. Rain and thunderstorms will form along a cold front moving through the mid-Mississippi and Ohio Valleys with snow in the Great Lakes region. Warm weather will precede the front across the Southeast and mid-Atlantic region.

**Today's discussion is from the
First Aid / Health Category.**

HYPOTHERMIA

Hypothermia occurs when your core body temperature falls below normal. It can easily happen in cold winds or wetness. Hypothermia can also occur in moderately cool temperatures, particularly if coupled with dehydration. People tend to forget to drink on cool, wet days and can get hypothermic even when the temperature stays well above freezing.

- - Symptoms of hypothermia include Slurred speech
 - Weakness and loss of coordination
 - Confusion
 - Irrational behavior

 - Uncontrollable shivering (although, at extremely low body temperatures, shivering may stop)
 - Pale and cold skin
 - Drowsiness – especially in more severe stages
 - Slowed breathing or heart rate
- Your body automatically begins to shiver to warm itself. As your energy is used up to keep warm, you may reach a point where your body will be unable to warm itself. If left untreated, your body will gradually shut down; and you can die.
- You can avoid hypothermia with the following precautions:
 - Guard against dehydration.
 - Avoid fatigue.
 - Avoid cold winds.
 - Take precautions, change out of wet clothes.
 - Be aware of the symptoms and take action upon their onset.
- If you recognize hypothermia, take the following steps:
 - Move the patient to shelter.
 - Remove wet clothes and replace them with warm, dry garments.
 - If the victim is alert, give them food and warm liquids to drink.
