

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 17, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity:	Light (568 new fires)
New large fires:	3 (*)
Large fires contained:	2
Uncontained large fires: **	1
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally there are no large fire being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: A developing storm along a stalled front across the Gulf Coast will produce showers and thunderstorms from Texas to Florida Friday, moving up the East coast by Monday as the system exits the country. Meanwhile, another Pacific storm will bring scattered rain and snow to the Northwest and the Great Basin over the weekend before weakening Monday. Scattered snow will linger across the northern Rockies and scattered rain and thunderstorms will develop along the Gulf states and Midwest through midweek.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

Today's discussion is from the
LCES (Lookouts, Communication, Escape Routes, Safety Zones)
Category.

Subjective vs. Objective Hazards

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards which are inherent to the alpine environment (e.g., avalanches, rock fall).

Objective hazards are a natural part of the environment. They cannot be eliminated and either one must not go into the environment where they exist or adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objectives hazards; lightning, fire-weakened timber (standing and lying), rolling rocks and entrapment by running fires. When these hazards exist the options are to not enter the environment or to adhere to a safe procedure. I feel the key to this safe procedure is LCES.

Although, the following discussion applies to all objective hazards, we will directly address fire entrapments.

• Identify subjective or objective hazards of working in the vicinity of:

- Dozer(s) or Tractor Plows
- Snags
- Helicopters
- Fixed Wing Aircraft
- Other Engines and Vehicles
- ATVs
- Oil and Gas Wells and Pipelines
- Power lines
