

**National Interagency Coordination Center
Incident Management Situation Report
Friday, June 1, 2012 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (92 new fires)
 New large fires: 3 (*)
 Large fires contained: 2
 Uncontained large fires: ** 8
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 2
 Type 2 IMTs committed: 1

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 7
 New large fires: 0
 Uncontained large fires: 2
 Type 1 IMTs committed: 1

Whitewater-Baldy, Gila NF. IMT 1 (Sciacca). Fifteen miles east of Glenwood, NM. Timber. Extreme fire behavior with running, torching and spotting. Residences threatened. Evacuations in effect.

Gladiator, Prescott NF. Started on state land one mile east of Crown King, AZ. Timber. Smoldering.

Incident Name	St	Unit	Size	Size Chge 24 Hrs	% Ctn	Est Ctn	Totl Pers	Pers Chge 24 Hrs	Crw	Eng	Heli	Strc Lost	\$\$ CTD	Origin Own

Predictive Services Discussion: A deep trough will move across the Great Lakes, pushing a cold front from the Mississippi Valley to the East coast. Showers and thunderstorms will develop along the cold front from the Gulf coast to New England. Temperatures will continue to rise in the West as a ridge builds over the region. Showers will develop over the far Northwest as another cold front move inland. Isolated thunderstorms are possible over the higher elevations of New Mexico and Colorado. In Alaska, widely scattered thunderstorms will develop over the eastern Interior while rain continues to fall over the South Coast.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

Today's discussion is from the
**LCES (Lookouts, Communication, Escape
Routes, Safety Zones) Category.**

Subjective vs. Objective Hazards

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards which are inherent to the alpine environment (e.g., avalanches, rock fall).

Objective hazards are a natural part of the environment. They cannot be eliminated and either one must not go into the environment where they exist or adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objective hazards; lightning, fire-weakened timber (standing and lying), rolling rocks and entrapment by running fires. When these hazards exist the options are to not enter the environment or to adhere to a safe procedure. I feel the key to this safe procedure is LCES.

Although, the following discussion applies to all objective hazards, we will directly address fire entrapments.

● Identify subjective or objective hazards of working in the vicinity of:

- Dozer(s) or Tractor Plows
- Snags
- Helicopters
- Fixed Wing Aircraft
- Other Engines and Vehicles
- ATVs
- Oil and Gas Wells and Pipelines
- Power lines
