

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 2, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (91 new fires)
 New large fires: 2 (*)
 Large fires contained: 0
 Uncontained large fires: ** 7
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 0

Nationally there are no large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires: 36
 New large fires: 1
 Uncontained large fires: 5
 Type 1 IMT committed: 1

Livermore Ranch Complex (two fires), Texas Forest Service. IMT1 (Wilder). Eighteen miles west of Fort Davis, TX. Pine, juniper and grass. Moderate fire activity. Numerous residences threatened. Evacuations in effect.

County Line, National Forests in Florida. Twenty-five miles north of Lake City, FL. Southern rough. Smoldering.

*** Ford Property**, Florida Forest Service. Nine miles southwest of Oak Hill, FL. Timber and southern rough. Active fire behavior.

Sugar Maple Road, Texas Forest Service. Three miles west of Kountze, TX. Timber. No new information.

Predictive Services Discussion: A weak trough will remain over the western U.S. while a ridge slowly builds in the East. Scattered showers and thunderstorms will move into the Northwest and the Great Basin but dry conditions will continue across much of the Southwest. Low pressure over the southern Plains will cause critical fire weather conditions associated with strong winds and low relative humidity over eastern New Mexico and parts of far western Texas. A front across the northern Plains and Great Lakes region will produce scattered thunderstorms from Iowa to the mid-Atlantic. In Alaska, snow will continue across most of the central and northern parts of the state while rain showers move across the southeast.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

Today's discussion is from the
Hazard Tree Category.

HAZARD TREE FELLING – HANG-UPS

- For decades, hazard trees have been associated with numerous deaths of workers assigned fire operations and project work. Incidents involving hazard trees are included in the top 5 life threats to wildland firefighters along with wildfire entrapment and motor vehicle accidents. In private industry, logging is recognized as the most dangerous occupation in the nation, and many associated fatalities involve felling hazard trees. Felling a hung-up hazard tree is a particularly hazardous and complex task.

- Sawyers are to be reminded on how vital it is to constantly apply and maintain situational awareness and assess risks, particularly when faced with problem of a **hang-up** hazard tree.
- In most cases, safely felling a hang-up requires extreme caution and expertise due to characteristic danger and complexity. The following are some topics experienced sawyers should review during 6 minutes for safety/tailgate safety discussions and cover in training modules specifically designed to address felling hang-up hazard trees:

- Cut/No Cut (walk-a-way) criteria
- Risk Assessment
- Situational Awareness Checklist
- Secure Felling Area
- No Work Zones (NWZ)
- Blasting option
- Equipment/cable option
- Role/responsibility of swamper/lookout
- Escape routes
- Pushing/driver tree opportunity
- Felling trees tied together
- Sidewinder potential
- Hazards of obscured view of top
- Need to keep looking up
- Weak/spiked tops, limb location/condition/density, and hidden defect/rot
- Prescribed step down (fence post/wafer) cutting techniques
- Rope Technique
