Predictive Services Discussion: Strong, drying southwest winds will continue over most of Arizona and portions of New Mexico today. Temperatures will be hot, resulting in low daytime relative humidity over most of the Southwest. Some light wetting rains will be possible across the eastern Great Basin into the northern Rockies. Widespread shower activity will occur over Florida.

**Today's discussion is from the
Fireline Safety Category.**

COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

Five common denominators that contribute to accidents/incidents have been identified through studies of tragedy fires. It is important for firefighters to readily recognize the following common denominators so that future tragedies can be prevented:

- Most incidents happen on smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mop-up stage.
- Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- Fires run uphill surprisingly fast in chimneys, saddles, gullies, and on steep slopes.
- Some suppression tools, such as helicopters or airtankers, can adversely affect fire behavior. The blasts of air from low-flying helicopters and airtankers have been known to cause flare-ups.
