**Predictive Services Discussion:** A storm system will move into southern California, producing scattered showers and wet thunderstorms over the southern half of the state into central Nevada. It will be windy and warm across portions of the southern plains, including Kansas and Oklahoma. Scattered showers with light high elevation snowfall can be expected in Montana east of the divide while widespread rain covers portions of the Great Lakes.

## Today's discussion is from the Weather / Fire Behavior Category

[Scenario](#) (Interactive Cloud Poster: loads slow)

### UNFAMILIAR WITH WEATHER AND LOCAL FACTORS INFLUENCING FIRE BEHAVIOR

- Ask questions of local experts! What kinds of questions would you ask?
- Does the operational period plan give you adequate weather and information? What kinds of weather forecasts can you get? What other weather or local information do you look for in the shift plan?
- Can you get information from resources that have been on the fire? What questions will you ask of the crew that you are replacing?
- Is there any other way to obtain information? List common sources of information on weather and local factors (Examples: Web based weather Activity Planner, Point Forecast Matrix, NOAA Internet Briefing)
- To reduce risks:
  - Base all actions on current and expected fire behavior.
  - Post lookouts.
  - Establish escape routes and safety zones.
  - Take extra caution! Discuss a fire where you relied on information from the local unit (perhaps where your fire knowledge and experience was very different from how they did things—southeast or Alaska).
  - Recognize and report visual indicators (clouds, WX obs., cold front passage, inversion breaking)
