

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, October 31, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity (October 27- October 31)

Initial attack activity: Light (304 new fires)
 New large fires: 8 (*)
 Large fires contained: 10
 Uncontained large fires: ** 0
 Area Command Teams committed: 0
 NIMOs committed: 3
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: Remnants of Hurricane Sandy will continue to move through the northeastern United States bringing moderate to heavy rain from the Ohio Valley through the Great Lakes and New England, while snow persists over the Appalachians from North Carolina to Pennsylvania. Strong winds will continue to buffet the region. A Pacific storm will move across the Northwest, producing rain from northern California to Washington, with snow in the mountains. A cold front will drop into the central Plains ushering in cooler but windy conditions to the Dakotas and Montana. Elsewhere, mild conditions will continue.

**Today's discussion is from the
Fireline Safety Category.**

ON A HILLSIDE WHERE ROLLING MATERIAL CAN IGNITE FUEL BELOW

When firefighters find themselves in Watchout Situation #13, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.)
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the Common Denominators of Tragedy Fires.
- Is the area free of chimneys, gullies, and steep slopes? Review the Common Denominators of Tragedy Fires.
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
 - Post lookouts.
 - Consider locating line in a defensible position. Talk about steep fires where you have had material rolling out below you and how you dealt with it.
