Predictive Services Discussion: Isolated thunderstorms will form over the higher terrain over the Four Corners region. Breezy conditions will continue over the northern Rockies and the northern Plains. Thunderstorms and heavy rain will spread from the central Gulf States to New England as a slow-moving front slides toward the Appalachians. Thunderstorms will also develop around the Great Lakes and the upper Mississippi Valley. Hot weather will return to the southern and central Plains.

Today's discussion is from the
Aviation Category.

[Scenario](#)

Scenarios are situations that can arise on a Wildland Fire or Aviation incident and are meant to add a realistic setting for the application of Today's Safety Discussion.

AVIATION "WATCH OUT" SITUATIONS

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?
Flight Hazards: Have they been identified and assessed? Have the pilots been informed?
- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
 - Radio Communications
 - Environmental Conditions – weather, visibility, terrain, elevation, temperatures
 - Mission Priorities
 - Successful Mission Completion Probabilities
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?
Multiple aircraft
Mixed types of aircraft
Poor visibility
- Do you have an escape route?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
