

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday August 9, 2013 – 0530 MT  
National Preparedness Level 3**

**National Fire Activity**

Initial attack activity:	Light (152 new fires)
New large fires:	9 (*)
Large fires contained:	3
Uncontained large fires: **	28
Area Command Teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	4
Type 2 IMTs committed:	14

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

One MAFFS C-130 aircraft from the 153<sup>rd</sup> Airlift Wing, Cheyenne (Wyoming Air National Guard), and one from the 302<sup>nd</sup> Airlift Wing, Colorado Springs (Air Force Reserve) are supporting wildland fire suppression operations out of Boise, ID.

**Northwest Area (PL 4)**

New fires:	27
New large fires:	2
Uncontained large fires:	13
Type 1 IMTs committed:	1
Type 2 IMTs committed:	6

**Douglas Complex** (three fires), Oregon DOF. IMT 2 (Sifford). Seven miles north of Glendale, OR. Timber and brush. Active ground fire with occasional torching and spotting. Numerous structures and a communication site threatened. Evacuations and road closures in effect.

**Big Windy Complex**, Grants Pass Unit, Oregon DOF. IMT 1 (Schulte). Twenty-five miles northwest of Grants Pass, OR. Timber and brush. Surface fire with occasional torching. Structures threatened. Evacuations and area closures in effect.

**Green Ridge**, Deschutes NF. IMT 2 (Minton). Fourteen miles northwest of Sisters, OR. Timber and brush. Active fire behavior with torching and spotting. Residences threatened. Area closures in effect.

**Whiskey Complex** (two fires), Umpqua NF. Transfer of command from IMT 2 (Williams) to IMT 2 (Johnson) will occur on 8/11. Six miles east of Tiller, OR. Timber, brush and grass. Moderate fire behavior. Structures threatened. Area closures in effect.

**Colockum Tarps**, Southeast Region, Washington DNR. IMT 2 (Nickey). Six miles southeast of Malaga, WA. Timber and grass. Creeping and smoldering with single tree torching. Numerous residences threatened. Evacuations in effect.

\* **GC Complex**, Malheur NF. IMT 2 (Watts). Includes previously reported Grouse Mountain incident. One mile north of John Day, OR. Brush and grass. Running with torching and long-range spotting. Numerous structures threatened. Evacuations and area closures in effect.

\* **Sharon Creek**, Vale District, BLM. Eighteen miles southeast of Rome, OR. Brush and grass. Active fire behavior.

**Grassy Mountain Complex** (two fires), Vale District, BLM. Twenty-two miles southwest of Jordan Valley, OR. Brush and grass. Short runs with isolated torching. Reduction in acreage due to more accurate mapping.

**Coyote Gap**, Burns District, BLM. Forty miles northwest of Fields, OR. Brush and grass. No further information received.

**Labrador**, Rogue River-Siskiyou NF. Thirteen miles northwest of Cave Junction, OR. Timber and brush. No new information. Last report unless new information is received.

**Predictive Services Discussion:** Scattered thunderstorms will form over northern California, Oregon and the northern Rockies. Showers and thunderstorms will continue over the central and southern Rockies. Temperatures will cool slightly in the Northwest but will remain warm to hot across the remainder of the West. In the East, scattered showers and thunderstorms will form along a stalled front from the central Plains to the mid-Atlantic coast. Scattered storms will also develop in the Gulf states and showers will move through New England. Temperatures will remain mild from the upper Midwest to New England and stay warm and humid in the South.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

"This Day in History" is a brief summary of a powerful learning opportunity. You can use this summary as a foundation and launch point for further dialogue and discussion. Apply these lessons learned to yourself, your crew, your team and your unit.

## Sadler Fire Entrapment – August 9<sup>th</sup> 1999 - Nevada

**Incident Summary:** On August 5, 1999, a dry lightning storm passes through northern Nevada igniting numerous fires. Due to a wet winter and spring, the fuels are abnormally heavy. Now, deep into summer, these fuels are measuring less than 80% live fuel moisture. Normal fire suppression tactics have not been effective on previous fires, particularly direct attack and burning operations during the heat of the day. In California a Type 2 crew—the GNP3—is assembled and dispatched to the Sadler Complex south of Elko, Nevada. The crew consists of 21 members (17 FFT2s) from fuels and suppression modules as well as non-fire and overhead positions from various home units. They work on the fireline for two days. The next day, August 9, while conducting a burnout operation, six firefighters from the GNP3 crew are entrapped by wildfire.

**0600** Briefing starts unannounced and several crews and overhead miss some or all of it. Briefing places little emphasis on a red flag warning that has been issued for high winds, low RH, and unstable atmospheric conditions. The IAP forecast calls for extreme fire behavior with high rates of spread, south winds increasing in afternoon, minimum RH 6-12%, Haines Index of 6, max temp 85-91, and FDFM of 3%. However, there are not enough IAPs for everyone—including the GNP3 crew boss and a Div Sup. Extreme fire behavior is discussed at the GNP3 crew briefing and is characterized as "normal".

**0900** GNP3 is assigned to support 2 Interagency Hotshot Crews asked to burnout from Big Safety Zone to the NW and the dozer line to Black Safety Zone. The dozer line is about  $\frac{1}{2}$  mile north of the head of the fire. **1100** After a recon, the hotshot superintendents refuse to accept the assignment until the line south of Big Safety Zone is secure. The Div Sup and the 2 IHCs leave to anchor and secure the line. GNP3 waits.

**1300** GNP3 accepts an assignment to burnout across the head of the fire from Black Safety Zone going east to the "Y". **1400** Ignition is delayed due to unfavorable winds. Overhead feels if they "didn't attempt a burn, the fire would get away" and the plan is changed to burnout from the east to the west instead—*the very plan that the hotshots had refused until secured*.

**1430** Due to concerns regarding GNP3 crew's lack of experience and fitness, only 3 members and the crew boss are used for the firing operation. Two additional crewmembers join them later. **1500** This squad begins firing from the "Y" supported by an engine. The fireline behind them is unsecured. Due to hills, no one on the burnout squad can see the main fire. Because of occasional wind shifts, the igniters must walk very fast and occasionally trot to keep ahead of their fire. They are unable to use the black as a safety zone. Safety zones along the dozer line turn out to be too small and too far apart.

**1515** Back behind the firing squad, the engine is very busy picking up multiple spot fires and slop overs. The engine captain radios to stop ignition. There is no response. The same tactical channel is also being used by the IHC burnout and is overloaded with traffic.

**1540** Overhead watching the burnout sees the main fire begin to move quickly down the hill toward the squad.

They are unsuccessful at warning the squad by radio. Shortly after, the main fire becomes visible to the squad as it crests the ridge to the south. It is described as a "river of fire" as it makes a run at the crew on the dozer line at speeds in excess of 300 chains/hour with 15 ft. flame lengths.

The engine is cut off from the squad and retreats to a safety zone. The order to "run" is given to the firing squad. Tools and gear are dropped on the way to the safety zone, almost 600 ft. away. Several crewmembers unsuccessfully attempt to deploy their fire shelters.

Crew members receive 1<sup>st</sup> and 2<sup>nd</sup> degree burns and smoke inhalation. An injured crewmember, an EMT, suffering from smoke inhalation, is asked to provide first aid for the others.

### Lessons Learned Discussion Points

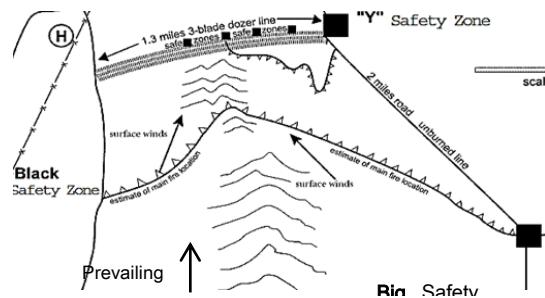

The burnout assignment had been turned down by two IHCs, and then accepted by GNP3. What responsibilities accompany both Overhead and line resources in this situation?

As a crew/crewmember, you have a responsibility to look after your own safety—which includes making informed decisions about Risk. Discuss the relationship between pages 1 and 17 in your IRPG.

In this situation, how would you and your crew establish and maintain LCES?

Radio frequencies can become overloaded with traffic. What are some of the solutions to this problem?

When the operational tempo of an incident is picking up fast, what can we do to maintain our situational awareness?
