Predictive Services Discussion: Widely scattered showers and thunderstorms will form over the Northwest and the northern Rockies. Isolated thunderstorms are possible over the central mountains of Idaho. Scattered showers and thunderstorms will also form over the central and southern Rockies, where locally heavy rain is possible. In the East, scattered showers and thunderstorms will stretch along a stalled front from the mid-Atlantic region to the mid-Mississippi Valley. Other storms will develop over the Gulf coast region. Temperatures will remain near normal to slightly warmer than normal over much of the West. Mild temperatures will remain over the northern Plains, Great Lakes and New England while the south continues hot and humid. Alaska will have scattered showers in the South and West. The Interior will warm and dry with windy conditions.

HELICOPTER LANDING AREA SELECTION

Aviation Category

Consider the following points when selecting a landing area for a helicopter:

- Locate a flat area that is of sufficient size for the helicopter you are expecting to land.
 - Type I -- Clear and level touchdown pad measuring 30 feet by 30 feet; safety circle measuring 110 feet in diameter.
 - Type II -- Clear and level touchdown pad measuring 20 feet by 20 feet; safety circle measuring 90 feet in diameter.
 - Type III -- Clear and level touchdown pad measuring 15 feet by 15 feet; safety circle measuring 75 feet in diameter.
- Choose an area clear of people, vehicles, and obstructions such as trees, poles, and especially overhead wires.
- The area must be free of stumps, brush, posts, large rocks or anything over 18 inches high.
- Consider the wind direction. Helicopters land and take off into the wind.
- Choose an approach free of obstructions. Any obstruction should be relayed to the helicopter crew during initial radio contact.
- Remove or secure any loose items in and around the landing area such as trash, blankets, hats, or equipment.
- Wet down the landing area if dusty conditions are present.
