

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Tuesday, August 27, 2013 – 0530 MT**  
**National Preparedness Level 4**

**National Fire Activity**

Initial attack activity:	Light (180 new fires)
New large fires:	1 (*)
Large fires contained:	2
Uncontained large fires: **	33
Area Command Teams committed:	0
NIMOs committed:	2
Type 1 IMTs committed:	7
Type 2 IMTs committed:	13

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

Total	85	925,737	28	35	16	924

**Predictive Services Discussion:** Scattered thunderstorms, some with heavy rain, will develop over much of the Great Basin, central Rockies and the far Southwest including southern California. Widely scattered thunderstorms will develop over Idaho, southwestern Montana and Wyoming. Temperatures around the West will remain very warm except cooler around thunderstorms. Breezy conditions will continue over northern California and the northern Great Basin. Scattered thunderstorms will occur in south Texas as very hot conditions continue across the Plains. Scattered showers and thunderstorms will move through the Great Lakes region, while conditions in the East will be warm.

## TRANSFER OF COMMAND

*Fireline Safety Category*

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

- Factors for increased risks to fireline personnel during transition periods include:
  - No, or poor, briefing of incoming personnel
  - Lack of fire weather and behavior information, both forecast and observed
  - Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
  - Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
  - Location of safety zones and escape routes may not be known and communicated to all resources.
  - Not all Resources know who is in command.
- Mitigation actions to take:
  - Lookouts: Post and maintain your own lookouts.
  - Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
  - Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
  - Transition at the morning briefing
  - Utilize the Incident Response Pocket Guide transition checklist
