

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 15, 2013 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (135 new fires)
 New large fires: 2 (*)
 Large fires contained: 1
 Uncontained large fires: ** 2
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires: 101
 New large fires: 2
 Uncontained large fires: 2

* **Clear-Cut**, Florida Panther NWR. Fifteen miles west of Naples, FL. Timber litter. Creeping with occasional torching.

* **Check Station Road**, Florida Forest Service. Three miles east of Astor, FL. Southern rough. No further information received.

Predictive Services Discussion: Scattered snow and rain will move across the northern half of the U.S. through the weekend, with colder temperatures continuing across the northern Plains and Great Lakes region. Early in the week, another series of winter storms will enter the West, bringing rain and snow across the intermountain region. This storm will move across the Plains, the Mississippi Valley and the East Coast bringing heavy rain and thunderstorms across the southern states along with snow to the northern states. Temperatures will warm across the southern regions while staying cold in the northern states.

HAZARD TREE FELLING – SECURE FELLING AREA

Hazard Tree Category

DISCUSSION: The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct EVERYONE to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign Lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
