

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, June 2, 2013 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (76 new fires)
 New large fires: 4 (*)
 Large fires contained: 1
 Uncontained large fires: ** 7
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 3
 ** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 13
 New large fires: 0
 Uncontained large fires: 3
 Type 2 IMTs committed: 2

Tres Lagunas, Las Vegas District, New Mexico State Forestry. IMT 2 (Pierson). Fifteen miles north of Pecos, NM. Timber. Active fire behavior with spotting. Numerous structures threatened. Evacuations and area closures in effect.

Thompson Ridge, Bernalillo District, New Mexico State Forestry. IMT 2 (Day). Ten miles north of Jemez, NM. Timber. Active fire behavior with spotting. Structures and Native American cultural site threatened. Evacuations and road closures in effect.

Beetown, San Carlos Agency, BIA. Eighteen miles east of San Carlos, AZ. Brush. Moderate fire activity with isolated torching and short-range spotting. Residences threatened.

Predictive Services Discussion: An upper low will drop across the far Northwest and northern Rockies behind a low system moving into the Canadian maritime. A broad ridge will build over the southern U.S. Scattered showers and thunderstorms will develop over the northern Rockies. Mild conditions will continue over the Plains while scattered thunderstorms move across the East coast. A few thunderstorms will form in the afternoon over eastern and central New Mexico. Temperatures will remain very warm in the West, the Gulf Coast and much of the East.

BUILDING FIRELINE DOWNHILL WITH FIRE BELOW

Fireline Safety Category

As a general rule, construct line moving uphill. Many firefighters have lost their lives attacking wildland fires from above. If there is no practical alternative to constructing line downhill, proceed only after weighing the following considerations:

- Has the area been scouted for fire perimeter and behavior? Discuss what you need to know about the fire perimeter and fire behavior before building fireline downhill with fire below.
- Will wind direction be at your back? Will it stay at your back? Talk about how winds can change when you are on a slope (e.g., time of day, upslope and down slope breezes, etc.).
- Is the area free of chimneys and gullies? How would you negotiate your line location if there were chimneys and gullies below where you needed to be working?
- Are there adequate safety zones and escape routes as you progress downhill? How do you maintain adequate safety zones and escape routes as you progress downhill?
- Can you carry your burnout downhill as you go to provide an anchor point and safety zones? Discuss how you decide when to carry the burnout with you or wait until you have tied in down below.
- Have lookouts been posted? What do the lookouts need to be on the watch for?
- Do you have good communications, especially with lookouts and crews working towards you? What are some of the dangers of not communicating with lookouts and crews working towards you? What are the benefits of maintaining good communications?
- Can the line be completed and burned out before the fire reaches the line? Discuss how this would affect where you locate the line.
- Do you have adequate resources to complete the assignment? What additional resources might you need to safely take on an assignment that includes building fireline downhill with fire below?
- Is aerial support available if needed? What benefits can aerial resources provide? What might be an added danger from aerial resources in this type of situation? (Common Denominators)
- Has everyone been briefed on the assignment, fire behavior, weather, communications, escape routes and safety zones, hazards and tactics? Discuss who might provide this briefing and where and when it might occur.
