

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Wednesday, May 29, 2013 – 0530 MT**  
**National Preparedness Level 1**

**National Fire Activity**

Initial attack activity:	Light (98 new fires)
New large fires:	1 (*)
Large fires contained:	2
Uncontained large fires: **	2
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

**Southern California Area (PL 2)**

New fires:	19
New large fires:	0
Uncontained large fires:	2
Type 2 IMTs committed:	1

**White**, Los Padres NF. IMT 2 (Nunez). Six miles north of Santa Barbara, CA. Chaparral. Active fire behavior. Numerous structures and high-voltage power lines threatened. Area closures in effect.

**General**, Monte Vista Unit, Cal Fire. Four miles east of Julian, CA. Chaparral. Minimal fire activity.

EA	0	0	0	0	0	0
SA	5	499	0	5	0	18
Total	11	9,721	2	14	1	78

**Predictive Services Discussion:** A broad trough will remain over the West while a ridge builds across the Plains and the East. Scattered showers and thunderstorms will continue across the Northwest and northern Rockies. Critical fire weather conditions from wind and low humidity will persist over the Southwest. Strong southerly flow over the Plains will support scattered thunderstorms from the Dakotas to Texas while scattered showers develop over parts of the Gulf States and across the Great Lakes and New England. Warm conditions will spread across the Southwest, the Plains and the East. Cool weather will remain over the Northwest, the northern and central Rockies and the Great Basin.

## SERIOUS INJURY PROCEDURES

*First Aid / Health Category*

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
  - Number of people injured
  - Type of injuries
  - Severity of injuries (light, moderate, severe, life threatening)
  - Mechanism of injury
  - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
