

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 25, 2013 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity:	Light (301 new fires)
New large fires:	0 (*)
Large fires contained:	1
Uncontained large fires: **	0
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Escape Routes (part 2)

*LCES (Lookouts, Communication, Escape Routes, and Safety Zones)
Category*

Escape Routes are the path the firefighter takes from their current locations, exposed to the danger, to an area free from danger. Notice that escape routes is used instead of escape route(s). Unlike the other components, there always must be more than one escape route available to the firefighter. Escape routes are probably the most elusive component of LCES. Their effectiveness changes continuously. As the firefighter works along the fire perimeter, fatigue and spatial separation increases the time required to reach the safety zone. The most common escape route (or part of an escape route) is the fireline. On indirect or parallel fireline, situations become compounded. Unless safety zones have been identified ahead, as well as behind, firefighters retreat may not be possible.

- Have you ever timed an escape route? If not how do you judge its effectiveness?
- Describe a time when you were uncomfortably distant from your escape route.
- Describe a method you have used to communicate an escape route to your crews.
