

National Interagency Coordination Center
Incident Management Situation Report
Friday, April 11, 2014 – 0800 MT
National Preparedness Level 1

National Fire Activity (Weekly Total)

Initial attack activity:	Light (560 new fires)
New large fires:	17 (*)
Large fires contained:	17
Uncontained large fires: **	4
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	336
New large fires:	13
Uncontained large fires:	4

* **Top Hat**, Osage Agency, BIA. Five miles south of Hominy, OK. Hardwood litter. Backing fire. Structures threatened.

* **Short Bus**, Osage Agency, BIA. Five miles southeast of Hominy, OK. Grass. Minimal fire activity.

* **Proctor**, Osage Agency, BIA. Four miles south of Hominy, OK. Grass. Smoldering. Structures threatened.

* **Brown Mountain**, National Forests in North Carolina. Ten miles north of Morganton, NC. Timber. Active fire behavior. Area closures in effect.

Predictive Services Discussion: High pressure will continue over the Intermountain West for unseasonably warm and dry conditions in the Southwest through early next week. This will be replaced by a series of weak low pressure systems with moist and cool weather in the Pacific Northwest by Tuesday, but breezy winds over the Southwest. Breezy conditions can also be expected for much of the eastern U.S. with progressive cold fronts every few days. In particular, a low pressure system over the High Plains is expected to intensify beginning Tuesday to bring a chance of thunderstorms as it moves through the Upper Midwest toward the Mid-Atlantic Coast. This unsettled weather pattern will linger through the remainder of next week.

HAZARD TREE FELLING SECURE FELLING AREA

Felling Safety

The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct **EVERYONE** to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
