

**National Interagency Coordination Center  
Incident Management Situation Report  
Tuesday July 8, 2014 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (148 new fires)
New large fires:	4 (*)
Large fires contained:	1
Uncontained large fires: **	20
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	4

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

**Northern California Area (PL 3)**

New fires:	20
New large fires:	0
Uncontained large fires:	4
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

**Monticello**, Sonoma-Lake Napa Unit, Cal Fire. Cal Fire IMT 1 (Smith). IMT is also managing the Butts fire. Five miles west of Winters, CA. Chaparral and grass. Moderate fire behavior. Residences threatened.

**Butts**, Sonoma-Lake Napa Unit, Cal Fire. Three miles north of Pope Valley, CA. Chaparral. Minimal fire behavior. Numerous residences threatened.

**Gulch**, Modoc NF. IMT 2 (Johnson). Three miles northwest of Canby, CA. Juniper and brush. Isolated interior smoldering.

**Coleman**, Northern California District, BLM. Transfer of command from IMT 2 (Minton) back to the local unit will occur today. Twenty-five miles east of Fort Bidwell, CA. Juniper, brush and grass. Minimal fire behavior.

**Predictive Services Discussion:** Scattered showers and thunderstorms are expected for the Southwest U.S. and Rocky Mountain regions today with isolated thunderstorms in the Pacific Northwest, California, and Great Basin. With a broad trough of low pressure over the entire Eastern U.S., it will remain unsettled from the lower Great Lakes through the Tennessee Valley with showers and thunderstorms concentrated along a cold front. Alaska will also remain unsettled with showers and thunderstorms, especially over the southern half of the state.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

## TRANSFER OF COMMAND

*Operational Engagement Category*

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

- No, or poor, briefing of incoming personnel
- Lack of fire weather and behavior information, both forecast and observed
- Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all Resources know who is in command.

Mitigation actions to take:

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
- Transition at the morning briefing
- Utilize the Incident Response Pocket Guide transition checklist
