**Predictive Services Discussion:** It will be dry and breezy again today in the Pacific Northwest, especially east of the Cascade Mountains. There will be isolated showers and thunderstorms in northern California and Nevada with scattered activity in the southwest U.S and central Rockies. Showers and thunderstorms are also expected from the Lower Mississippi Valley northeastward through the Ohio Valley. Dry and cooler weather will prevail over the Great Lakes region today.

## Safety Zones 2 (LCES)

*Operational Engagement Category*

Safety Zone(s) are locations where the threatened firefighter may find refuge from the danger. Unfortunately shelter deployment sites have been incorrectly called safety zones. Safety zones should be conceptualized and planned as a location where no shelter is needed. This does not intend for the firefighter to hesitate to deploy their shelter if needed, just if a shelter is deployed the location is not a true safety zone. Fireline intensity and safety zone topographic location determine safety zone effectiveness.

- How have you determined the distinction between a safety zone and a deployment zone?
- Is refuge in a vehicle, house an acceptable tactic?
- Consider access to the incident. You are often confronted with considerable distances of unburned fuel to cross. How do you manage LCES?
