Two MAFFS C-130 air tankers and support personnel from the 153rd Airlift Wing (Wyoming Air National Guard) have been deployed to Boise, ID to support wildland fire suppression operations in the western U.S.

Northwest Area (PL 5)

New fires:	19
New large fires:	0
Uncontained large fires:	20
NIMOs committed:	1
Type 1 IMTs committed:	4
Type 2 IMTs committed:	13

Carlton Complex, Northeast Region, DNR. IMT 1 (Opliger), IMT 2 (Rabe), IMT 2 (Allbee) and NIMO (Hahnenberg). Seven miles south of Twisp, WA. Timber, light logging slash and brush. Moderate fire behavior with short runs and spotting. Numerous residences threatened. Evacuations, area and road closures in effect.

Chiwaukum Complex, Okanogan/Wenatchee NF. IMT 1 (Lewis). IMT is also managing the Mills Canyon fire. Nine miles northwest of Leavenworth, WA. Timber, heavy logging slash and brush. Moderate fire behavior with group torching. Numerous residences threatened. Evacuations, area and road closures in effect.

Mills Canyon, Southeast Region, Washington DNR. Two miles southwest of Entiat, WA. Timber, brush and grass. Creeping and smoldering. Area closure in effect.

Sunflower, Umatilla NF. IMT 2 (Wilde). Ten miles north of Monument, OR. Timber and grass. Moderate fire behavior with isolated torching. Structures threatened. Area closures in effect.

Pine Creek, Prineville District, BLM. IMT 2 (Fry). IMT is also managing the Donnybrook and Black Rock fires. Eleven miles south of Fossil, OR. Juniper, brush and grass. Creeping and smoldering. Residences threatened.

Donnybrook, Prineville District, BLM. Ten miles southeast of Antelope, OR. Juniper, brush and grass. Short uphill runs and isolated torching. Structures threatened.

Black Rock, Prineville District, BLM. Started on private land ten miles east of Antelope, OR. Juniper and grass. Short uphill runs and isolated torching. Residences threatened.

Ochoco Complex (3 fires), Ochoco NF. IMT 2 (Dunford). Twenty-eight miles east of Prineville, OR. Timber. Moderate fire behavior. Structures threatened. Area closures in effect.

Logging Unit Complex (5 fires), Warm Springs Agency, BIA. IMT 1 (Schulte). Twenty-five miles northwest of Warm Springs, OR. Timber, medium logging slash and brush. Creeping with isolated torching and short-range spotting. Structures threatened.

Waterman Complex, John Day Unit, Oregon DOF. IMT 2 (D. Johnson). Twenty miles northeast of Mitchell, OR. Timber, brush and grass. Active fire behavior with short crown runs and spotting. Structures threatened. Evacuations, road and area closures in effect.

Bridge 99 Complex, Deschutes NF. IMT 2 (Fillis). Twenty miles north of Sisters, OR. Mixed conifer, brush and grass. Surface fire with group torching. Numerous structures threatened. Evacuations, road and area closures in effect.

Shaniko Butte, Warm Springs Agency, BIA. IMT 2 (Williams). Fifteen miles north of Warm Springs, OR. Juniper, brush and grass. Minimal fire behavior. Numerous structures threatened.

Watermelon Hill, Spokane District, BLM. IMT 2 (Leitch). Started on private land seven miles southwest of Cheney, WA. Timber and grass. Creeping and smoldering. Numerous structures threatened. Reduction in acreage due to more accurate mapping.

Buzzard Complex, Burns District, BLM. IMT 1 (Poncin) and IMT 2 (Watts). Thirteen miles northwest of Riverside, OR. Juniper, brush and grass. Minimal fire behavior. Precipitation occurred over the fire area. Structures threatened.

Pittsburg, Wallowa-Whitman NF. IMT 2 (B. Johnson). Twenty-one miles southwest of Grangeville, ID. Timber, brush and grass. Minimal fire behavior. Residences threatened. Area closure in effect.

Bingham Complex (2 fires), Willamette NF. IMT 2 (Nickey). Five miles east of Marion Forks, OR. Timber. Smoldering. Structures threatened.

Center, Prineville District, BLM. Started on private land three miles northeast of Post, OR. Juniper, brush and grass. No new information.

Lone Mountain 1, North Cascades NP. IMT 2 (Hutton). Three miles northeast of Stehekin, WA. Timber and brush. No further information received.

Predictive Services Discussion: The northwest U.S. will see shower and thunderstorm activity intensify today as a trough of low pressure taps into moist flow aloft. In contrast, the southwest quarter of the U.S. and California will see warming and drying as a ridge of high pressure amplifies over the Four Corners region. A cold front stretching from the High Plains to the Great Lakes region will bring showers and thunderstorms, while storms will also develop from the Gulf Coast through the southeast U.S. and Mid-Atlantic Coast.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking? What are YOU doing?

Cramer Fire - Idaho – July 22nd 2003

"May the lessons of the Cramer Fire not be lost on an Idaho ridge"

Incident Summary: Central Idaho including the Salmon-Challis Nat'l Forest had been in a period of drought for the last 4 years. Spring and summer rainfall had lagged. 1630 July 20th a fire is reported in the area of Cramer Creek. Jumpers are dispatched and size up the Cramer Fire at 3 acres with high spread potential. High winds keep them from engaging the fire. Firefighters are flown in to a helispot (H1) on a ridge between Cramer and Cache Bar drainages, and due to fire behavior, do not engage the fire. The fire burns actively until 0230. By morning the fire is over 35 acres.

In addition to other air and ground resources, the Indianola helicopter H193 and Helitack crew report to the fire at 1515 on the 21st. By 1952 the fire is 200 acres. At 2000 fire intensity is reported to be low yet due to a thermal belt, the fire burns actively until 0300. Around 0930 the morning of the 22nd, H193 rappels two Helitack into a new helispot (H2) up the ridge from H1. Air attack reports fire perimeter is now over the ridge and in the Cache Bar drainage. The fire is now on both sides of the ridge that the helispots are on. Fire is active below H1. The Helitack are falling large trees on H2 to clear room for medium helicopters that had been ordered for a crew shuttle. H193 transitions to bucket work on H1 at 1127 and minutes later the firefighters on H1 pull back and retreat down the trail toward the river. 20 minutes later H1 is burned over. Fire activity is reported as "intense".

By 1430 the fire in the Cache Bar drainage is an active fire front. At 1447 plans were made to remove the Helitack from H2. At 1500 the fire on both sides of the ridge begins to spread rapidly...Both helicopters assigned to the fire are at the helibase 15 minutes away for refueling and maintenance when the Helitack call for an immediate pick up. At 1505 they call again for immediate pickup. At 1509 they call for immediate pickup and report that they are fine just taking a lot of smoke. At 1513 the Helitack report fire and smoke below them and request immediate pickup. At 1519 Helitack contact helibase regarding status of helicopter. Arriving at the fire, the helicopter is unable to land due to smoke. Both rappellers leave H2 at 1520. At 1524 the Cache Bar drainage is fully involved in fire. The rappellers make final call for immediate pickup... Both firefighters die soon after.

History - The Salmon River Breaks area of the Salmon-Challis Nat'l Forest has a long history of entrapping firefighters; 161 to date. Steep slopes predispose areas to rollout and rapid, uphill fire growth commonly lending to extreme fire behavior and difficult suppression.

- *How can information about an area's fire history help your situational awareness?*

Size up – Crews are informed at the July 22 morning briefing that conditions will be getting progressively warmer and drier than previous days. Temperatures surpass 100°F and set record highs. RH's are 10-15%. Fuels in the Cache Bar drainage are short grass on the south aspects and nearly continuous fields of ceanothus on the north. Live fuel moistures are critically low and the Burn Index (BI) and Energy Release Component (ERC) indicate dangerous conditions.

- *Based on the predicted weather and the fire information above, what are your concerns?*
- *How could you and your crew safely engage a fire in a similar situation?*

L – The investigation report states that there were no effective lookouts for the rappellers at H2.

- *It is not uncommon to assign small squads to isolated tasks such as cutting helispots. The rappellers on H2 were clearing large trees to make a larger helispot. How would you and your crew maintain situational awareness of the fire and the felling operation at the same time?*

C – The rappellers were made aware of the low intensity fire in the Cache Bar drainage as soon as they were dropped off but the development of an active fire front in the Cache Bar drainage was observed by the lead plane and air attack 50 minutes before the fire reached H2. It was never communicated to them.

- *What will you and your crew do during any fire assignment to get accurate information about current fire behavior?*

E and S – There were no effective safety zones for the rappellers at H2 and once H1 below them burned over, the only way out was a helicopter.

- *Helicopters have become a common resource on fires transporting us to and from remote fireline, delivering our food, water, supplies, and medevac. But what would you do if the helicopter couldn't come? Discuss why depending on helicopters as an escape route is a bad idea?*

Incident Complexities - On any incident, we may or may not be aware of problems with incident management effectiveness, adequacy of resources, or other big-picture details.

- *Discuss how you and your crew will maintain safety without knowing these things.*
