

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Friday June 6, 2014 – 0530 MT**  
**National Preparedness Level 1**

**National Fire Activity**

Initial attack activity:	Light (85 new fires)
New large fires:	1 (*)
Large fires contained:	1
Uncontained large fires: **	2
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

**Southwest Area (PL 3)**

New fires:	7
New large fires:	0
Uncontained large fires:	1

**Black River Tank**, Fort Apache Agency, BIA. Twenty-one miles southeast of Whiteriver, AZ. Pinyon pine, juniper and brush. Moderate fire behavior with interior group torching.

**Galahad**, Grand Canyon NP. Previously reported incident. Twelve miles northwest of North Rim, AZ. Timber. Moderate fire behavior. Last report unless significant activity occurs.

**Skunk**, San Carlos Agency, BIA. Previously reported incident. Sixteen miles east of San Carlos, AZ. Juniper and grass. Creeping and smoldering with isolated interior burning. Last report unless significant activity occurs.

Incident Name	St	Unit	Size	Size Chge 24 Hrs	% Ctn	Est Ctn	Totl Pers	Pers Chge 24 Hrs	Crw	Eng	Heli	Strc Lost	\$\$ CTD	Origin Own

**Predictive Services Discussion:** Warm and dry conditions will continue over the Western U.S. today with isolated thunderstorms over the Sierra Nevada Mountains. A cold frontal boundary from the Central Plains to the Mid-Atlantic coast will be a focus for showers and thunderstorms. These storms may produce flash flooding and severe weather. Another area that will be unsettled with showers and thunderstorms will be the Upper Mississippi Valley with a weak upper level disturbance moving east.

## Subjective vs. Objective Hazards

*Operational Engagement Category*

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards which are inherent to the alpine environment (e.g., avalanches, rock fall).

Objective hazards are a natural part of the environment. They cannot be eliminated and either one must not go into the environment where they exist or adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objectives hazards; lightning, fire-weakened timber (standing and lying), rolling rocks and entrapment by running fires. When these hazards exist the options are to not enter the environment or to adhere to a safe procedure. I feel the key to this safe procedure is LCES.

Although, the following discussion applies to all objective hazards, we will directly address fire entrapments.

Identify subjective or objective hazards of working in the vicinity of:

- Dozer(s) or Tractor Plows
- Snags
- Helicopters
- Fixed Wing Aircraft
- Other Engines and Vehicles
- ATVs
- Oil and Gas Wells and Pipelines
- Power lines
