

National Interagency Coordination Center
Incident Management Situation Report
Thursday June 19, 2014 – 0530 MT
National Preparedness Level 2

National Fire Activity

Initial attack activity:	Light (70 new fires)
New large fires:	2 (*)
Large fires contained:	3
Uncontained large fires: **	5
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	2
Type 2 IMTs committed:	1

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: A slow moving upper low will drift into central Canada, allowing temperatures to warm across the Northwest. Scattered rain and snow showers will linger in the northern and central Rockies. Hot and dry conditions will continue in the Southwest. High pressure over the eastern U.S. will keep warm and humid conditions over most of the eastern two-thirds of the country. Scattered showers and a few thunderstorms will develop across the Upper Midwest and the Ohio Valley. Thunderstorms will also form along a front across the southern Plains and lower Mississippi Valley. In Alaska, scattered showers will develop along the southern coast and across the central and eastern Interior.

ASH PIT HAZARDS

Miscellaneous Fireline Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards or decking areas.
 - Small rodent holes that have become filled with decadent combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
 - White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.
- Mitigation measures to consider:
 - Identification of high risk landscape.
 - Identify and flag all hazardous discovered ash pits.
