

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Monday June 23, 2014 – 0530 MT**  
**National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (99 new fires)
New large fires:	1 (*)
Large fires contained:	1
Uncontained large fires: **	4
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	2

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

**Southwest Area (PL 3)**

New fires:	11
New large fires:	0
Uncontained large fires:	2
Type 2 IMTs committed	1

**Asaayi Lake**, Navajo Region, BIA. IMT 2 (Day). Three miles southeast of Crystal, NM. Logging slash, timber and brush. Creeping and smoldering with isolated single tree torching. Residences threatened.

**Dehose**, Fort Apache Agency, BIA. Four miles east of Cibecue, AZ. Pinyon pine, juniper and grass. Backing fire.

Incident Name	St	Unit	Size	Size Chge 24 Hrs	% Ctn	Est Ctn	Totl Pers	Pers Chge 24 Hrs	Crw	Eng	Heli	Strc Lost	\$\$ CTD	Origin Own

Total	3	292,750	5	0	6	229

**Predictive Services Discussion:** Warming will continue in the West as an upper ridge builds across the region. A few showers and thunderstorms will form over the northern and central Rockies. An upper trough will drop into the central states, bringing rain and a few thunderstorms to the Plains and the Upper Midwest. Scattered thunderstorms will also form in the Southeast. Cooler conditions will spread across the northern and central Plains while the South remains warm and humid. Alaska will warm slightly, but scattered showers and thunderstorms will continue to develop in the central Interior and south part of the state.

## INITIAL ATTACK FIRE SIZEUP/SAFETY

*Operational Engagement Category*

Having a good sizeup is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting.

- Use the following reporting factors for size-up and reference local fire size-up cards. Discuss others that may be used.
  - Fire name and location
  - Terrain (slope, aspect, elevation) and position of fire on the slope
  - Size of fire
  - Fuel type, anticipated control problems, and spread potential
  - Values threatened
  - Weather conditions (wind speed and direction)
  - Fire behavior
  - Resources on the fire and those needed
  - Estimated containment and control times
  - Cause (known, suspected, under investigation)
- After your initial size-up of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.
  - Have you sized up the fire and relayed the information to dispatch?
  - Is the observed fire weather consistent with the forecast?
  - Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
  - Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
  - Are lookouts in place or can you see all of the fire area?
  - Can you communicate with everyone on the fire and with dispatch?
  - Are escape routes and safety zones established? If you are using the black, is it completely burned and without a reburn potential?
  - Are safety and the standard fire orders being followed and/or mitigated?
  - Do you have a complete list of what resources have been ordered for the fire?
  - Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
