Predictive Services Discussion: Warming and drying is expected today for the Pacific Northwest and California. Showers and thunderstorms will develop over the Great Basin in association with a closed low pressure system moving northeast from California. The southern and central Rocky Mountain regions will also see precipitation as moisture surges northward through the southern Plains, where heavy rain is anticipated again in Texas and eastern New Mexico. A strong, but fast-moving trough will deliver showers and thunderstorms as well as gusty winds to the upper Midwest and northeast U.S.

COMMUNICATIONS (LCES)

Fire Communications Category

Effective communication is a critical backbone of safe and successful operations.

● Discuss the factors that can affect radio communication at the incident.

- Knowledge of the radio issued to the individuals
- Net control, frequencies
- Line-of-sight restrictions
- Antenna polarization effect (direction of the antenna)
- Minimizing noise interference
- Wide band narrow band

● How can you mitigate potential problems?

- Implement effective communication procedures--be brief, use clear text, and to-the-point.
- Give a good comprehensive briefing. (Refer to the Briefing Checklist inside the back cover of the Incident Response Pocket Guide.)
- Confirm that relayed information is received, and understood.
- Keep a continuous information flow (e.g., updates on weather, fire behavior, work progress; changes in strategy/tactics; arrival of additional resources; solicit feedback).
- Establish emergency check-in procedures.
- Provide a minimum of 4 radios per 20-person firefighter crew.

● The Five Communication Responsibilities for All Firefighters:

- Brief others
- Debrief your actions
- Communicate hazards to others
- Acknowledge messages
- Ask if you don't know
