

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 27, 2015 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (255 new fires)
 New large incidents: 4(*)
 Large fires contained: 4
 Uncontained large fires: ** 3
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires: 199
 New large incidents: 3
 Uncontained large fires: 3

Sidewall, Okmulgee Field Office, BIA. Four miles northeast of Weleetka, OK. Hardwood litter and grass. Minimal fire behavior. Last report unless significant activity occurs.

Cupid, Okmulgee Field Office, BIA. Three miles southwest of Hanna, OK. Hardwood litter and grass. Minimal fire behavior. Last report unless significant activity occurs.

West End, McFaddin NWR. Four miles east of High Island, TX. Grass. No new information. Last report unless significant activity occurs.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>.

Predictive Services Discussion: The weather pattern that has held over the past several weeks with high pressure in the West and deep, cold low pressure east of the Rockies will transition this week to more progressive and stormy. As such, temperatures will show a significant cooling trend for the West and a gradual warm up for the East. In terms of precipitation, periodic rain and mountain snow can be expected across the Intermountain West including the Cascades and Sierras where snowpack is especially sparse. A series of troughs will dig southeast across the Great Basin and Four Corners region through the Rockies before spreading wintery weather across the Midwest by early next week. Showers and thunderstorms will also be a factor for the Gulf Coast and Southeast regions through next week as moisture surges north toward the Tennessee Valley.

FREQUENT SPOT FIRES ACROSS THE LINE

Weather / Fire Behavior Category

There are few watchout situations that state more clearly how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- What is your probability of ignition doing? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place or order to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, etc.) and how you will get good information from that person. (Are you relying on an air attack that is busy with air tankers?)
- Where are you in the burning period? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.

Have an idea? Have feedback? Share it.
