

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Friday, January 2, 2015 – 0800 MT**  
**National Preparedness Level 1**

**National Fire Activity Dec. 29 – Jan. 1**

Initial attack activity:	Light (14 new fires)
New large incidents:	0 (*)
Large fires contained:	1
Uncontained large fires: **	0
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>.

**Predictive Services Discussion:** Arctic air will continue to dictate very cold temperatures across the country the next several days, with some moderation by the middle of next week. Overall, the precipitation storm track will favor the southern areas with significant snowfall for the southwest U.S. and Central Rockies through this weekend. Wintery weather is also expected from the southern Plains eastward through the Tennessee Valley. Meanwhile, soaking precipitation will continue over the far southeast half of the country with a plume of deep, Gulf moisture. By next week, Lake-effect snow will return to the upper Great Lakes region in association with a weak upper level disturbance.

## VEHICLE ENTRAPMENT

*Vehicles & Roads Category*

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation. • Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles (Harris Fire, SoCal, 2007).
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking break, leave the motor running at high RPM, and keep the vehicle lights on
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters with reflective material placed against window.
- You must protect your airway; remain as low in the vehicle as possible, and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
  - Temperatures may reach over 200 degrees Fahrenheit.
  - Smoke and sparks may enter the vehicle.
  - Plastic parts may start to melt and give off toxic gases.
  - Windows may start to crack.
  - Exposed skin may receive radiant heat burns.
- If the vehicle catches fire, or windows blow out, and you must exit the vehicle before the fire has passed, then:
  - Each crewmember should cover themself with a fire shelter.
  - Exit the vehicle from the side away from the greatest heat.
  - Stay together and get as low to the ground as possible, moving away from the vehicle.
  - Deploy your shelter in a safe area.
