Predictive Services Discussion Strong high pressure over the western U.S. will be nudged eastward slightly by a weak upper level disturbance moving into the Pacific Northwest. This will bring some gusty winds to the region with dry humidity and it may trigger additional showers and thunderstorms for the northern Rockies. Meanwhile record breaking temperatures will continue across much of the western U.S. Scattered showers and thunderstorms are expected along the Continental Divide and southwest U.S. where the seasonal monsoon will begin to take hold over the region. The Ohio Valley will also see showers and thunderstorms with an upper level trough digging south through the Great Lakes. Alaska will see slightly cooler temperatures and some cloud cover as a trough slides toward the Gulf coast.

EXTREME FIRE BEHAVIOR 2

Weather / Fire Behavior Category

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

● Discuss how the following factors can contribute or lead to extreme fire behavior:

- Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
- Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
- Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds

Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes.

● To aid situational awareness, track NFDRS live and dead fuel moisture outputs.

● Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
