

National Interagency Coordination Center
Incident Management Situation Report
Friday, November 27, 2015 – 0800 MT
National Preparedness Level 1

National Fire Activity (Nov. 20 – Nov. 26)

Initial attack activity: Light (109 new fires)

New large incidents: 7
 Large fires contained: 8
 Uncontained large fires:** 0
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

**Uncontained large fires include only fires being managed under a full suppression strategy.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: The remnants of Hurricane Sandra will deliver a strong fetch of tropical moisture to the southeast quarter of the Nation beginning this weekend and again late next week. This moisture will tap into cold air along a slow-moving cold front to produce rain and snow from the southern Plains through the Tennessee and Ohio Valleys before finally moving through the Appalachian Mountains. In the West a closed low pressure system will absorb several upper level disturbances including the Pacific Northwest, Great Basin and the Rocky Mountains. This will continue an active weather pattern with periodic storms throughout the week. The Desert Southwest will generally remain dry with temperatures near normal.

Nutrition: What we are eating and why

Firefighter Health & First Aid

Nutrition is a critical part of the health and safety of wildland fire suppression personnel. This is the fuel for the body to perform the work and maintain cognitive abilities. Wildland firefighters on the fireline need 4,000-6,000 calories a day to not go into an energy deficit. Consider the following key points when choosing your meal:

- There are 3 major energy sources in food: carbohydrates, protein, and fats.
- Carbohydrates (also called sugar) offer an immediate source of energy for your body. They provide the fuel for your muscles and organs, such as your brain.
- Proteins are the basic building blocks of the human body. They are made up of amino acids that help build muscles, blood, skin, hair, nails and internal organs.
- Fat is an essential nutrient that provides energy, energy storage, insulation, and contour to the body.
- MTDC recommends eating 150-200 kcals every 2 hours during the work shift to maintain blood glucose and energy levels.

Carbohydrates:

- Studies on athletes have shown that carbohydrates are the most critical energy source for performance and health.
- Carbohydrates are your body's first choice for fuel. If given a choice of several types of foods simultaneously, your body will use the energy from carbohydrates first.
- If you do not eat enough carbohydrates, the following can occur:
 - Fatigue
 - Muscle cramps
 - Poor mental function
- The fire camp lunches (called shift food) are designed to allow firefighters small amounts of food (primarily carbohydrates) that can be easily eaten throughout the work shift.

Discussion Points

How are you eating your fire lunch? Is it all at once or small amounts throughout the day? Think of long duration events (Ultra Runs, triathlons), do you see athletes stopping for a big meal or eating small amounts constantly throughout the race?
