Predictive Services Discussion: Breezy to windy conditions are expected across much of the western U.S. today ahead of an approaching cold front associated with a flattening ridge of high pressure aloft. Widely scattered showers and thunderstorms will develop over portions of California and the Great Basin as the remnants of Tropical Storm Linda converge ahead of the front. Storms are also expected over the southwest U.S. with this feature. East of the Rockies, a strong trough of low pressure will move through the northeast U.S. today with cool temperatures and rain showers across New England. A lingering cold front over Florida will provide storms there as well.

ENTRAPMENT AVOIDANCE

Operational Engagement Category

Avoiding situations where firefighters become entrapped is the first concern when devising strategy and tactics. The following discussion points are among the things that should be considered.

- Discuss the three types of safety zones and describe examples.
 - The burn
 - Natural features
 - Constructed sites
- Discuss the guidelines for distance separation to avoid radiant heat injury.
 - Four times the maximum flame height (20 feet-flame height x 4 = 80 feet radius from firefighters)
 - Discuss size based on amount of resources and equipment in the area.
- Discuss heat impact factors that will affect the guidelines for distance separation.
 - Convection heat from wind and terrain features
 - Location relative to fire spread
 - Reburn potential of fuel in safety zone
- Discuss that firefighter's have a right to know the location of their escape routes and safety zones at all times.
- Discuss that firefighter have a right to ask for clarification when faced with unclear instructions or fear of the unknown.
- Describe a basic procedure for identification of effective escape routes and safety zones.
 - Observe
 - Visualize
 - Identify
 - Time
 - Inform
 - Evaluate
