

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, December 30, 2016 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity (Dec. 23 – Dec. 29)**

Initial attack activity:	Light (250 new fires)
New large incidents:	5
Large fires contained:	3
Uncontained large fires:**	4
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 1)**

New fires:	243
New large incidents:	5
Uncontained large fires:	4
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

\* **2265**, Texas A & M Forest Service. Started on private land four miles southeast of Park Springs, TX. Brush, tall and short grass. Moderate fire behavior.

\* **Rudolph**, Texas A & M Forest Service. Started on private land two miles southeast of Stinnett, TX. Tall and short grass. Minimal fire behavior with smoldering. Residences threatened.

\* **Off Guard**, Wewoka Agency. Three miles southwest of Cromwell, OK. Hardwood litter. Minimal fire behavior. Structures threatened.

\* **South Stigler**, East Central Area, Oklahoma DOF. Four miles southwest of Stigler, OK. Hardwood litter and short grass. Minimal fire behavior. Structures threatened.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** A dry, warm, Westerly flow will continue across the Southern half of the nation Friday while the Northern tier of the country remains under a cold Northwesterly flow. A cold front will develop over East Texas Saturday and move into the Southeast on New Year's Day spreading showers and storms into drought affected areas. Meanwhile, another strong system will move into the Pacific Northwest and Northern Rockies from the Gulf of Alaska further building upon the mountain snowpack. By Monday, mountain locations across Northern California and the Great Basin will begin to see accumulations as the system moves south in response to another round of Arctic air diving south into the Northern Rockies and Great Plains Monday night and Tuesday. By Wednesday, most of the CONUS except for coastal areas and South Texas will be under the influence of the blustery airmass. Gusty winds across the Eastern half of the country could create some wind chill issues, especially across the Ohio River Valley Thursday.

## FREQUENT SPOT FIRES ACROSS THE LINE

*Weather / Fire Behavior Category*

There are few watchout situations that state more clearly how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- What is your probability of ignition doing? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place or order to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, etc.) and how you will get good information from that person. (Are you relying on an air attack that is busy with air tankers?)
- Where are you in the burning period? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.

**Have an idea? Have feedback? Share it.**
