

National Interagency Coordination Center
Incident Management Situation Report
Wednesday, June 8, 2016 – 0530 MT
National Preparedness Level 2

National Fire Activity

Initial attack activity:	Light (85 new fires)
New large incidents:	2
Large fires contained:	2
Uncontained large fires:**	6
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

**Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

Ten wildland fire suppression crews are assigned to support large fires in Alberta, Canada.

Southwest Area (PL 3)

New fires:	5
New large incidents:	0
Uncontained large fires:	0
Type 2 IMTs committed:	1

Juniper, Tonto NF. IMT 2 (Bales). Ten miles south of Young, AZ. Timber and chaparral. Active fire behavior with uphill runs and flanking. Residences threatened. Area closures in effect.

North, Cibola NF. Previously reported incident. Twenty-five miles southwest of Magdalena, NM. Timber. Moderate fire behavior with flanking, backing and creeping. Structures threatened. Road, trail and area closures in effect. Last report unless significant activity occurs.

A3S – Southeast District, Arizona DOF

Southern California Area (PL 2)

New fires:	23
New large incidents:	0
Uncontained large fires:	2
Type 1 IMTs committed:	1

Coleman, Los Padres NF. IMT 1 (McGowan). Eleven miles southwest of King City, CA. Chaparral and tall grass. Minimal fire behavior. Road, trail and area closures in effect.

Old, Los Angeles County Fire Department. One mile east of Calabasas, CA. Brush and short grass. Minimal fire behavior.

Northwest Area (PL 2)

New fires: 9
 New large incidents: 1
 Uncontained large fires: 3

Draw, Fremont-Winema NF. Twenty miles northeast of Chiloquin, OR. Timber and hardwood litter. Moderate fire behavior with torching and creeping.

* **Jenkins Reservoir**, Vale District, BLM. Fifteen miles north of Juntura, OR. Brush and short grass. Moderate fire behavior. Sage grouse habitat threatened.

Owyhee Canyon, Vale District BLM. Four miles south of Rome, OR. Brush and short grass. Minimal fire behavior with backing, creeping and smoldering. Sage grouse habitat threatened.

Predictive Services Discussion: A strong ridge will remain over the West while a broad trough sits over the East. A weak wave will move slowly through the Great Basin, triggering scattered thunderstorms across the Rockies. A second trough will begin moving toward the coast, bringing isolated showers and thunderstorms to the Northwest. A front along the southeast coast will produce thunderstorms over Florida and showers and a few thunderstorms will continue in New England. Very warm temperatures will continue in the Interior West and the Southwest as cooler conditions begin moving into the Pacific Northwest. Hot conditions will develop over the Plains while very cool weather remains over the Great Lakes and the Northeast. In Alaska, scattered showers and a few thunderstorms will move into the northern half of the state. Temperatures will remain cool to mild in the north, warm in the southwest and Interior.

Hydration

Firefighter Health & First Aid

Dehydration is the result of the body trying to regulate its temperature naturally through sweating. Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.

- Studies conducted on wildland firefighters indicate that during fire suppression activities firefighters need to drink a minimum of 1 quart of fluid each hour of work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Hyponatremia (abnormally low concentration of sodium in the blood) as a result of excessive water intake a potentially life-threatening complication and can be prevented when rehydration is enhanced by fluids containing sodium and potassium, or when foods with these electrolytes are consumed along with water.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement.
- Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.

Discussion Points

- What are you doing right now to ensure that you are hydrated?
