Predictive Services Discussion: Widespread, scattered convection will continue across the northwestern portion of the country as the upper level low pressure system located along the Oregon and Northern Californian Coasts remains stationary. As has been the case the past several days, storms will be a mix of dry and wet. The low pressure area does show signs of weakening though. However, its effects will still impact the west for a few more days. Temperatures will again return to being above normal, but not as high as the previous heat wave. Looking elsewhere, slightly warmer temperatures will develop over the East as a westerly flow develops. Precipitation will be focused along a stalled cold frontal boundary that will be draped over the South.

SPOT WEATHER FORECAST

Weather / Fire Behavior Category

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

- Basic elements needed for a spot weather forecast include:

- Name of fire and management agency
- Request time and date
- Location by ... section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks and important U.S. indicators)

Activity: Calibrate your Kestrel and review belt weather kit use.
