

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, December 20, 2017 – 0800 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (8) new fires
New large incidents:	1
Large fires contained:	1
Uncontained large fires:**	2
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	2
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: A strong Pacific storm system will move inland from the coast spreading snow across the Pacific Northwest and the western half of the Northern Rockies. Valley rain and mountain snow will be possible across northern California. However, precipitation is not expected from the Bay area south, nor is it expected any further south than the central Great Basin. A breezy, dry southwesterly flow is expected across the Southwest and Texas and could lead to pockets of critical fire weather conditions. The Great Plains and the eastern states can expect an overall breezy westerly flow pattern with near normal temperatures. Scattered snow showers will be possible across Alaska as an active westerly flow continues. More significant snow will be possible across the state later in the week.

Unburned Fuel Between You And The Fire

Operational Engagement Category

It is important for firefighters to recognize unburned fuel between themselves and the fire as Watchout Situation #11. Often it is not possible or practical for direct attack on a fire. Before attempting indirect attack and any time the firefighter is in a position where there is unburned fuel between them and the fire, the following questions must be addressed immediately:

- Can you see the fire or are you in contact with someone who can? Discuss situations you might find yourself in where you are out in the green and cannot see the fire. What can you do?
- Is fire spread in a direction away from you? Do you consider the potential for fire spread? Are you safe if the wind switches?
- Will your position be defensible when the fire reaches you? Talk about what must be taken into account when building indirect line or approaching a fire through the green.
- Is your line anchored? Discuss how you anchor indirect line.
- Are your escape routes and safety zones adequate? What is adequate?
- Are weather indicators constantly changing?
- To reduce the risks:
 - Post lookouts
 - Consider a different location. Review situations where you constructed indirect line or approached a fire through the green and how you provided for your safety.
