

National Interagency Coordination Center
Incident Management Situation Report
Saturday, June 3rd, 2017 – 0530 MT
National Preparedness Level 2

National Fire Activity

Initial attack activity:	Light (101 new fires)
New large incidents:	2
Large fires contained:	1
Uncontained large fires:**	3
Area Command Teams Committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	22
New large incidents:	1
Uncontained large fires:	1
Type 1 IMTs committed:	1
NIMOs committed:	1

West Mims, Okefenokee National Wildlife Refuge. Unified command between Florida IMT 1 (Leneave) and NIMO (Quesinberry). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Minimal fire behavior with creeping and smoldering. Numerous structures threatened. Road, area and trail closures in effect. Precipitation occurred over the fire area yesterday.

* **Bravo Range**, Avon Park Air Force Base, DOD. Thirteen miles east of Avon Park, FL. Southern Rough. Moderate fire behavior with wind driven runs, flanking and backing. Structures threatened. Last report unless significant fire behavior occurs.

Prada Drive, Florida Forest Service. Ten miles south of Punta Gorda, FL. Southern Rough. Minimal fire behavior.

Predictive Services Discussion: A weak ridge of high pressure will develop over the West and will allow for temperatures to return to being slightly above normal. Isolated dry thunderstorms will be possible across the Great Basin and Oregon in the afternoon. From the Great Plains eastward, expect overall wet conditions as a weak cold front slowly moves east. Dry areas will be mainly along the Atlantic Coast and across the northern portion of the Great Lakes where breezy northwest winds will also be possible. In Alaska, the ridge of high pressure will remain anchored over the state and will continue the warm, dry conditions across the Interior. Coastal areas along the Alaskan Gulf Coast will see an increase in precipitation as a low pressure area to the south pumps moisture northward.

DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Operational Engagement Category

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with resources until the job is completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
 - Crew supervisor(s) is in direct contact with lookout who can see the fire.
 - Communication is established between all crews.
 - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
- Can fire be carried with you?
