

National Interagency Coordination Center
Incident Management Situation Report
Friday, March 10, 2017 – 0800 MT
National Preparedness Level 1

National Fire Activity (Mar. 3 – Mar. 9)

Initial attack activity:	Light (1,095 new fires)
New large incidents:	61
Large fires contained:	42
Uncontained large fires:**	21
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires:	987
New large incidents:	48
Uncontained large fires:	17
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

* **Starbuck**, Oklahoma DOF. IMT 1 (Dueitt). Two miles west of Gate, OK. Tall grass and brush. Minimal fire behavior with smoldering. Numerous residences threatened.

* **Lee Williams Rd**, Florida Forest Service. Florida Forest Service IMT 2 (Dolan). Thirteen miles east of Naples, FL. Short grass. Moderate fire behavior.

* **Perryton**, Texas A & M Forest Service. Started on private land 15 miles southwest of Lipscomb, TX. Tall grass. Active fire behavior with creeping and smoldering.

* **283**, Oklahoma DOF. Ten miles north of Woodward, OK. Tall grass and brush. Minimal fire behavior with smoldering. Numerous residences threatened.

* **Selman**, Oklahoma DOF. Ten miles northeast of Fort Supply, OK. Tall grass and brush. Minimal fire behavior with smoldering. Numerous residences threatened.

* **Milsap**, Osage Agency, BIA. Seven miles east of Hominy, OK. Hardwood litter, brush and tall grass. Minimal fire behavior.

* **Spocogee**, Okmulgee Field Office, BIA. Two miles south of Mannford, OK. Hardwood litter and tall grass. Active fire behavior with isolated torching, creeping and smoldering. Structures threatened.

* **Lost Creek**, Okmulgee Field Office, BIA. Four miles north of Weleetka, OK. Hardwood litter, tall grass and brush. Minimal fire behavior with smoldering.

* **Irate**, Okmulgee Field Office, BIA. One mile northeast of Lamar, OK. Hardwood litter and tall grass. Minimal fire behavior with creeping and smoldering. Structures threatened.

* **Bunch Mt**, Northeast Area, Oklahoma DOF. Seven miles northeast of Cookson, OK. Hardwood litter and short grass. Minimal fire behavior. Residences threatened.

* **Trail**, Florida Forest Service. Five miles southwest of Doral, FL. Short grass. Minimal fire behavior.

* **Staples Road**, Southeast Area, Oklahoma DOF. Nine miles southeast of Pittsburg, OK. Timber. Active fire behavior with creeping.

* **Spring Creek Farm**, Wewoka Agency, BIA. Six miles southeast of Bowlegs, OK. Hardwood litter and tall grass. Minimal fire behavior with smoldering.

* **Territory**, Oklahoma DOF. Five miles west of Duncan, OK. Tall grass and brush. Moderate fire behavior with smoldering. Residences threatened.

* **Tucker**, Wewoka Agency, BIA. Seven miles southeast of Bowlegs, OK. Hardwood litter and brush. Active fire behavior with creeping and backing. Structures threatened.

* **Conway Ranch**, East Central Area, Oklahoma DOF. Sixteen miles east of McAlester, OK. Timber and short grass. Active fire behavior with running.

* **Badcock Grub Rd**, Florida Forest Service. Eight miles northeast of Olga, FL. Southern rough. Minimal fire behavior.

* **Watsimioie**, Osage Agency, BIA. Three miles southeast of Hominy, OK. Hardwood litter and brush. Active fire behavior with creeping, backing and smoldering. Residences threatened.

* **Fenton**, Land Between the Lakes NRA. Four miles west of Golden Pond, KY. Hardwood litter. Minimal fire behavior. Last report unless significant activity occurs.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: A strengthening ridge of high pressure along the West Coast will lead to a warming and drying trend through Wednesday from the Rockies westward. Precipitation will be scattered and limited mainly to the Pacific Northwest and Northern Rockies but will become more widespread on Thursday as another wet system begins to move on shore. The pattern that produced the extended period of critical fire weather across the Southern Plains will take a break as the winds subside, but it will remain warm and dry in the most critical areas. Eastern Oklahoma and Kansas should receive needed rainfall Saturday and again early next week as a pair of cold fronts develop over the area and move off to the east. Cooler conditions will develop across the Northern Plains, Great Lakes, and New England through Tuesday as a low pressure area drops south from Hudson Bay, pulling down cold air. A late winter storm may be possible across New England Tuesday. Drought impacted areas across the Southeast can expect precipitation over the weekend and into Monday as a slow moving cold front moves southeast from Tennessee into Florida. Another round of precipitation is possible late next week as well. Looking north to Alaska, the cold, dry pattern will continue across the interior while coastal areas continue to be snowy under a moist onshore flow.

EXTREME FIRE BEHAVIOR 2

Weather / Fire Behavior Category

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
 - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
 - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds

Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes.

- To aid situational awareness, track NFDRS live and dead fuel moisture outputs.
- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
