

National Interagency Coordination Center
Incident Management Situation Report
Friday, March 31, 2017 – 0800 MT
National Preparedness Level 1

National Fire Activity (Mar. 24 – Mar. 30)

Initial attack activity:	884
New large incidents:	31
Large fires contained:	48
Uncontained large fires:**	7
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	776
New large incidents:	30
Uncontained large fires:	4

Parliament, Big Cypress National Preserve, NPS. Five miles northeast of Ochopee, FL. Southern rough and tall grass. Moderate fire behavior with creeping and short-range spotting. Structures threatened. Area and trail closures in effect. Last report unless significant activity occurs.

Red Fox, National Forests in Florida. Eleven miles northeast of Lake City, FL. Southern rough. Minimal fire behavior.

Garfield Road, Florida Forest Service. Twenty two miles northwest of Jacksonville, FL. Southern rough. Minimal fire behavior. Structures threatened.

* **Bridge**, St. Johns National Wildlife Refuge. One mile west of Port St. John, FL. Tall grass. Moderate fire behavior with running and isolated torching. Last report unless significant activity occurs.

* **Conner**, National Forests in Florida. Eight miles northeast of Silver Springs, FL. Southern rough and brush. Minimal fire behavior with creeping. Road closures in effect.

Taylor, Daniel Boone NF. Five miles northeast of Pine Knot, KY. Hardwood litter. No new information. Last report unless new information is received.

* **Halford Ln**, Mississippi Forestry Commission. Started on private land one mile north of Yazoo City, MS. Timber and hardwood litter. Moderate fire behavior with crowning. Structures threatened. Last report unless significant activity occurs.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: Periods of critical fire weather conditions will continue across West Texas and southeastern New Mexico through mid-week as a series of fronts pass to the north. The most critical day may be today when the resulting winds will be most pronounced. Early Southwestern fire season activity may begin to migrate westward along the Mexican border as a trend toward drier and breezy conditions continues. Dry conditions across Florida may see some slight relief mid-late next week as a wet front passes. Elsewhere across the Southeast, a major severe weather outbreak is possible Sunday through Monday across the Deep South. The northern half of the Lower 48 will remain under a cool, active pattern with wet fronts passing every few days. Looking north to Alaska, above normal temperatures will continue along the Pacific Coast and the interior as a warm front remains draped across the state through Wednesday. With overnight lows still expected to be below freezing, snowpack melting rates should be near normal.

MANAGING VEHICLE TRAFFIC IN SMOKE

Vehicles/Roads Category

Smoke has the potential to cause safety hazards to vehicle traffic in the vicinity of active fires (both wildfires and prescribed), especially at night. The following traffic-related items should be considered and addressed in local unit planning documents prior to an incident/project.

- Identification, location, and phone numbers of local units that have law enforcement and traffic control responsibilities in the smoke-impacted areas. Review any local agreements with these agencies presently in place.
- Identification of important, public roads that may be impacted by smoke.
- Identification of adequate equipment and trained personnel to control traffic. This may include warning signs, communications equipment (preferably not using the active fire frequency) and vehicles equipped with warning or flashing lights.
- Identification and phone numbers of radio and television stations that can issue traffic advisories for the smoke-impacted area.
- Identification of alternative traffic routes as part of the incident/project traffic plan.
- Identification of traffic routes subject to temperature inversions as well as contributory factors such as fog and ice.
- When potential smoke-related problems are identified:
 - Advise the Incident Commander, Burn Boss, or Agency Administrator that severe smoke exists.
 - Notify local law enforcement units and highway departments of a potential problem.
 - Implement preplanned actions such as posting smoke warning signs.
 - Ensure that proper equipment is ready and appropriate personnel are briefed on contingency plans and are available to control traffic.
