

**National Interagency Coordination Center
Incident Management Situation Report
Friday, May 12th, 2017 – 0800 MT
National Preparedness Level 1**

National Fire Activity (May 5 – May 11)

Initial attack activity:	Light (677 new fires)
New large incidents:	6
Large fires contained:	3
Uncontained large fires:**	7
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	410
New large incidents:	4
Uncontained large fires:	7
Type 1 IMTs committed:	1

West Mims, Okefenokee National Wildlife Refuge. IMT 1 (Dueitt). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Active fire behavior with running, spotting and flanking. Numerous structures threatened. Evacuations, road, area and trail closures in effect.

Cowbell, Big Cypress National Preserve, NPS. Thirty six miles west of Weston, FL. Tall grass, southern rough and timber. Moderate fire behavior with creeping and smoldering. Structures threatened. Area and trail closures in effect.

* **Anclote Branch**, Florida Forest Service. Six miles east of New Port Richey, FL. Southern rough. Minimal fire behavior.

30th Ave., Florida Forest Service. Nine miles east of Golden Gate, FL. Southern rough. Minimal fire behavior.

International, Merritt Island National Wildlife Refuge. Four miles south of Oak Hill, FL. Southern rough. Moderate fire behavior with creeping and torching. Structures threatened.

* **Dallus Creek**, Florida Forest Service. Six miles northeast of Steinhatchee, FL. Southern rough. Minimal fire behavior.

* **FL-FLS-060640**, Florida Forest Service. Six miles southeast of Starke, FL. Southern rough. Minimal fire behavior. Last report unless significant activity occurs.

MM 87 on 75, Florida Panther National Wildlife Refuge. One mile southwest of Miles City, FL. Tall grass, southern rough and timber. No new information. Last report unless new information is received.

Predictive Services Discussion: No significant relief for Florida and southern Georgia is expected over the next week as drought conditions worsen in response to the warm and very dry conditions. A weakening cold front will bring scattered light precipitation to northern Florida and southern Georgia early Saturday followed by increased winds to critical areas later in the day. Windy and dry conditions are expected across southern Nevada and the Four Corners region Friday and Saturday as a powerful cold front passes. A significant pattern change will occur across the northwestern portion of the nation as a series of unseasonably cool and strong low pressure systems move into the CONUS from the Gulf of Alaska through Wednesday. Mountain snowfall is probable from the middle elevations of the Cascades to the northern Sierras Tuesday and Wednesday. The Great Plains and other locations across the East should remain quiet over the next week with significant fire weather impacts not expected. In Alaska, southeastern sections of the interior will see scattered showers with occasional thunderstorms while areas east and north of Fairbanks will remain warm and mostly dry. It could be dry as well out near Tanana next week as the precipitation from an Aleutian low remains further west near Galena. <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

Weather / Fire Behavior Category

Five common denominators that contribute to accidents/incidents have been identified through studies of tragedy fires. It is important for firefighters to readily recognize the following common denominators so that future tragedies can be prevented:

- Most incidents happen on smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mop-up stage.
- Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- Fires run uphill surprisingly fast in chimneys, saddles, gullies, and on steep slopes.
- Some suppression tools, such as helicopters or air tankers, can adversely affect fire behavior. The blasts of air from low-flying helicopters and air tankers have been known to cause flare-ups.
