

**National Interagency Coordination Center
Incident Management Situation Report
Friday, May 19th, 2017 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (133 new fires)
New large incidents:	3
Large fires contained:	1
Uncontained large fires:**	8
Area Command Teams Committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	82
New large incidents:	1
Uncontained large fires:	6
Type 1 IMTs committed:	1
NIMOs committed:	1

West Mims, Okefenokee National Wildlife Refuge. IMT 1 (Dueitt) and NIMO (Quesinberry). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Minimal fire behavior with creeping and smoldering. Numerous structures threatened. Evacuations, road, area and trail closures in effect.

Cowbell, Big Cypress National Preserve, NPS. Thirty six miles west of Weston, FL. Tall grass, southern rough and timber. Minimal fire behavior with creeping and smoldering. Structures threatened. Area and trail closures in effect.

Mother's Day, Florida Forest Service. Five miles southeast of Florida City, FL. Southern rough. Moderate fire behavior.

Raintree Blvd., Florida Forest Service. Two miles west of Lake Suzy, FL. Southern rough. Minimal fire behavior.

* **Hutto**, Florida Forest Service. Four miles northeast of Palmdale, FL. Southern rough. Moderate fire behavior.

30th Ave., Florida Forest Service. Nine miles east of Golden Gate, FL. Southern rough. No new information.

Crane Island, Florida Forest Service. Eight miles northwest of Venus, FL. Short grass. No new information.

Predictive Services Discussion: Critical fire weather conditions will remain possible along the Mexican border with southern New Mexico and West Texas as a post frontal westerly flow continues to interact with very low afternoon humidities. Snow will be possible in the higher elevations of the central Rockies as the previous day's system begins to move into the central Plains. Scattered showers and thunderstorms will be possible across southern Florida in the afternoon as tropical moisture begins to work its way into the state from the east. The warming and drying trend along the West Coast and into the Northern Rockies will increase as the high pressure ridge along the coast begins to move inland. Isolated showers and storms will remain possible across Alaska through the day as moisture lingers over much of the state. A few lightning strikes will remain possible in the afternoon along the border with the Yukon Territory.

FIRE NOT SCOUTED AND SIZED UP

Operational Engagement Category

Watchout Situation #1 comes up during initial attack and **every time** resources arrive at a fire.

● Before taking action on the fire, the following considerations must be addressed:

- Can you personally observe the fire or must you use scouts? Describe ways you can scout and size up a fire.
- Do you know the location of the fire perimeter? Discuss situations in which the fire perimeter may not be obvious. (Spotty fires, etc.)
- Do you know the direction of fire spread? When isn't the direction of fire spread obvious? (Wind shifts, spotty fires, etc.)
- Does the direction of fire spread increase risk? Talk about situations where you may have to approach the head of the fire. (Hiking down from a helispot, approaching from an existing road, switching winds, etc.)
- Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types? (Spot fires in fir, extreme fire potential in flashy fuels, etc.)
- Are there aerial resources that can act as lookouts?

● Continued...

- Do topographic hazards exist? What can you assume from what kind of terrain the fire covers? (Slope, chimneys, aspect, etc.)
- Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
- Do other dangers exist? Have you talked about factors specific to the area you are working in? (Hunters in the woods, drought, snag patches, etc.)

● To reduce the risks:

- Post lookouts until the fire is sized up and escape routes and safety zones are established.
- Retreat if the situation is too complex. Review fires where you had to wait until the area in which you were assigned to work was scouted and sized up before you were allowed onto the fireline.
