Predictive Services Discussion: High pressure will dominate most of the U.S. with fall conditions covering most of the country. Hot and dry conditions will continue over much of coastal and interior California and the Southwest deserts with locally gusty winds in favored areas. A front will drape across the far Southeast keeping showers and few thunderstorms over Florida, Georgia, and the Carolinas.

AVIATION WATCH OUTs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?

Flight Hazards: Have they been identified and assessed? Have the pilots been informed?

- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
 - Radio Communications
 - Environmental Conditions – weather, visibility, terrain, elevation, temperatures
 - Mission Priorities
 - Successful Mission Completion Probabilities
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?

Multiple aircraft

Mixed types of aircraft

Poor visibility

- Do you have an escape route?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
