Predictive Services Discussion: A deep trough will move through the northwestern U.S. Scattered rain and snow will move across the Northern Rockies from eastern Washington to central Montana and south to the central Idaho and western Montana mountains. Rainfall of 0.25" to 0.50" with higher amounts up to 1.00" will be possible. Snow will fall over elevations above 8,000 feet in western Montana, central Idaho, and northwestern Wyoming with local amounts over 6" possible. Scattered thunderstorms will form over the central and southern Rockies and parts of Arizona. Critical fire weather conditions will continue across Nevada, southern Idaho, northern Utah, southern Wyoming, and northwestern Colorado, as relative humidity below 15 percent and winds over 30 mph continue along and ahead of the upper trough. The rest of the West will see moderating temperatures, breezy conditions, and generally dry weather through the day. East of the Rockies, strong thunderstorms will move through the upper Midwest, while gusty southerly winds blow across the Plains. Widely scattered afternoon thunderstorms will develop along the Gulf Coast. High pressure over the East Coast will keep warm conditions in place.

Terrain And Fuels Make Escape Difficult

Operational Engagement Category

When fighting wildland fires, it is often easy to get committed to areas that put you in Watchout Situation #17. As firefighters progress along the fireline, it is imperative to constantly keep the following considerations in mind:

- Retreat times should be based on the slowest member of the crew.
- Does the crew's condition allow for fast travel?
 - Discuss physical and mental conditions that could interfere with a crew's ability to travel quickly.
- Will you get adequate warning to make it to your safety zone? Who will you rely on to warn you? How will you ensure that everyone gets the word?
- Can escape routes be improved to make travel to safety zones faster? Are escape routes marked?
 - Review what you have done on past fires to locate, mark, and improve escape routes.
 - Will posting more lookouts give adequate warning? Talk about situations where there was more than one firefighter assigned to be lookout.
- To reduce the risks:
 - Consider other tactics that will allow you to be in a safer location. Review fires where you have had to change tactics because escape to safety zones was not adequate.
