

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Friday, December 7, 2018 – 0800 MT**  
**National Preparedness Level 1**

**National Fire Activity**

Initial Attack Activity:	Light (109) new fires
New large incidents:	2
Large fires contained:	2
Uncontained large fires:**	0
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Service Discussion:** Strong temperature inversions will be in place across the West through the weekend as a ridge of high pressure drifts east toward the Continental Divide as another moderately strong weather system begins to move on shore into the Pacific Northwest Sunday bringing snow to the Cascades. By Monday, this system will weaken slightly and begin to move inland but will still bring some snow to the Northern Rockies and the northern Great Basin. In the East, a stronger system will move across the Deep South and bring very wet conditions through Tuesday. A breezy, dry southwesterly flow will be in place across the southern Great Plains on Tuesday and Wednesday as a cold front moves east across the region. Snow will return to the northwestern states late Tuesday and Wednesday as well as another, slightly stronger system moves east along the Canadian Border. This system will strengthen and quickly move east to the Great Plains for Thursday and into the East by Friday.

## Hazard Tree Secure Felling Area

*Felling Safety Category*

The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct **EVERYONE** to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
