

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 16, 2018 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (372) new fires
New large incidents:	9
Large fires contained:	7
Uncontained large fires:**	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires:	307
New large incidents:	3
Uncontained large fires:	2

* **Compartment 4**, Florida Panther NWR. Twenty miles east of Naples, FL. Southern rough. Moderate fire behavior with flanking. Last report unless significant activity occurs.

* **HWY 34 & 73**, Oklahoma DOF. Six miles south of Hammon, OK. Tall grass and brush. Active fire behavior with wind driven runs.

2073 Command, Oklahoma DOF. Seven miles southwest of Kellyville, OK. Timber. No new information. Last report unless new information is received.

*** **Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: The cold upper level trough of low pressure over the Great Plains and the East has flattened out considerably and has migrated westward to impact the intermountain west with colder than average temperatures. Snow will continue across the Northern Rockies as an Arctic frontal boundary remains stalled along the Continental Divide. Further south, much needed rain will continue along the Mexican border with New Mexico and across North Texas. Elsewhere expect overall breezy conditions with some pockets of critical fire weather across eastern Colorado and the panhandles of Texas and Oklahoma. A major winter storm is expected across the northwestern portions of the country as a very moist system drops south from British Columbia and overrides the cold, Arctic airmass to produce copious amounts of snow across the Cascades, northern Idaho, and Western Montana through early Monday. As the system moves into the Great Basin on Tuesday, much colder air shall be pulled down from central Canada into the West. Ahead of the system, expect another round of critical fire weather conditions across New Mexico, Colorado, the panhandles, and western Kansas. A moderating but breezy westerly flow will develop mid-week allowing for temperatures to warm slightly. However, a very strong shot of cold air is could move into the northern Great Plains Thursday.

In Alaska, a warm ridge of high pressure will keep temperatures well above average through the weekend. However, a passing front will bring some snow to the interior Sunday night and Monday. Another, more significant round of snow is possible Wednesday and Wednesday night as another front passes.

Fight Fire Aggressively, But Provide For Safety First

Operational Engagement Category

Standard Fire Order #10 must be taken into account at all times when fighting fire. In order to fight fire safely and aggressively, every firefighter must be able to answer the following questions:

- Is the suppression method adequate? Ask yourselves, are we making progress? Are we beating our heads against a wall? Is there a better way to get this done? Give examples when you have had to change your suppression method.
- Are there adequate resources and time for effective suppression? Ask yourselves, do we need to retreat and reevaluate? Talk about times when you have realized you weren't getting anywhere and needed to retreat and start managing firefighters and placing orders.
- Are lookouts posted? Discuss when you post lookouts, who you would choose to be a lookout, and where they should be located.
- Are communications prompt with crews and other resources? Review the importance of good communications on the fireline.
- Have escape routes and safety zones been established? Talk about your crew's procedure for establishing escape routes and safety zones. Review what constitutes an escape route and a safety zone.
- Do you feel comfortable with your assignment? Discuss the situation check. Remind firefighters that every individual has the right to question an assignment.
- To reduce the risks:
 - Post lookouts.
 - Retreat if the situation is too complex. Emphasize that safety is everyone's responsibility; we all want to be good firefighters and being safe is part of that.
 - Do you have established trigger points?
