**Predictive Services Discussion:** The ridge of high pressure over the CONUS amplify over the Great Plains and allow for monsoonal moisture to move as far north as south central Canada. Nearly the entirety of the Lower 48 will remain hot except across the Pacific Northwest and along the Canadian Border. Temperatures nation-wide will be at least 10 degrees above average. Most of the convection mentioned above will be wet; however, expect the storms that develop along the periphery of the moisture plume to be mostly dry. Scattered storms will also be possible along the Gulf Coast as a stationary front lingers over the region. In Alaska, high pressure across the Interior will keep the region warm and dry. However, low pressure areas over the northern Gulf, Bristol Bay, and Barrow, should keep the remainder of the state cooler than average with some precipitation expected.

## Working with Helicopter Drops

*Aviation Category*

Consider the following questions when you have a helicopter with a bucket working in your area:

If the helicopter is a Type 1, increase the distance of standby place from the drop zone.

Use helicopter drops to knock down or secure a fire area that poses a direct imminent threat to escaping control lines or climbing up ladder fuels.

- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What are the winds doing?
- What is the turnaround time for the helicopter?
- Are people on the ground aware of the effects of the helicopter's rotor wash?
- Give feedback to the pilot about drop accuracy. Be honest and constructive.
- Be aware that helicopter performance capabilities may be significantly reduced at high altitudes and/or high temperatures.
